HS40's ground-breaking design was inspired by users' ideas and suggestions during development. Every detail, such as the fully articulating monitor arm, the operating panel which can be easily adjusted to different heights, and additional storage space, has been created to make the work environment more comfortable. And it is this focus on the user that has led to the product winning a prestigious 2017 iF Design Award.

Handbook of Methods and Instrumentation in Separation Science, 2009-11-11 Handbook of Methods and Instrumentation in Separation Science Volume 1 provides concise overviews and summaries of the main methods used for separation. It is based on the Encyclopedia of Separation Science. The handbook focuses on the principles of methods and instrumentation. It provides general concepts concerning the subject matter; it does not present specific procedures. This volume discusses the separation processes including affinity methods, analytical ultracentrifugation, centrifugation, chromatography, and use of decanter centrifuge and dye. Each methodology is defined and compared with other separation processes. It also provides specific techniques, principles, and theories concerning each process. Furthermore, the handbook presents the applications, benefits, and validation of the processes described in this book. This handbook is an excellent reference for biomedical researchers, environmental and production chemists, flavor and fragrance technologists, food and beverage technologists, academic and industrial librarians, and nuclear researchers. Students and novices will also find this handbook useful for practice and learning. One-stop source for information on separation methods. General overviews for quick orientation. Ease of use for finding results fast. Expert coverage of major separation methods. Coverage of techniques for all sizes of samples, pico level to kilo level. **Forensic Science Handbook** Richard Saferstein, 2002. The second in a three-volume series, this popular and widely circulated professional handbook describes the theories and practices of today's criminalistics and covers a wide range of subject areas relevant to the services rendered by crime laboratories and related facilities. Presents authoritative reviews from recognized forensic criminologists and forensic scientists well versed in their chosen areas of expertise. Considers a specific examination technique for a wide range of evidence prevalent in the modern crime laboratory, e.g., DNA, hair, paint, soil, glass, petroleum products, explosives, alcohol in blood and breath, and questioned documents. Describes the theory, operation, and forensic utilization of such modern analytical instruments as mass spectrometry, capillary electrophoresis, high performance liquid chromatography, and the visible microspectrophotometer. Emphasizes the symbiotic relationship between forensic science and criminal law as it examines the role and conduct of the expert witness, rules of evidence, and the legal requirements governing the admissibility of scientifically evaluated evidence. For professionals in forensic science and criminology. **Proceedings of Fourth International Symposium on Adjuvants for Agrochemicals** Robyn E. Gaskin, 1995. **Encyclopedia of Chromatography** Jack Cazes, 2009-10-12. Thoroughly revised and expanded, this third edition offers illustrative tables and figures to clarify technical points in the articles and provides a valuable reader-friendly reference for all those who employ chromatographic methods for analysis of complex mixtures of substances. An authoritative source of information, this introductory guide to specific chromatographic techniques and theory discusses the relevant science and technology, offering key references for analyzing specific chemicals and applications in industry and focusing on emerging technologies and uses. □□□□, 1998.
