

Required Tools for Movement Installation and Adjustment

Small Hex Key, 1/16" (1.6mm)
Phillips® #2 Screwdriver (Screw must be removed)

Movement/Chime Mounting When you are ready to mount the movement, use a hex key to tighten up the four Phillips screws for fast movement mounting (see back of each panel for the fast-grip area for movement).

The 1/2" (12.7mm) movement will need to be attached to a piece of wood commonly called a *peg board*. Generally the board used will give the board length and width of the case and have a thickness of 1/2" (12.7mm) (100%). The board will require a cutout for the center shaft and will be used afterward, as well as a slot to accommodate the alarm tone (see Illustration 2). The slot will be a single slot without the 1/2" (12.7mm) cutout with your movement. The slot will have a rectangular hole, which will be 1/2" (12.7mm) in width as well as a dimensioned diagram for the center shaft and hole for the alarm tone.

The slot in which there would mount to the front surface of the dashboard. Then the slot has been mounted, slide the alarm tone extension over the alarm tone of the movement. Do not tighten the screws at the time. Next, you may adjust the movement to the inside of the slot (see back of the clock case with the 4 mounting screws included). When mounting the movement, use the slot value given provided with the movement to ensure that the center shaft and key will align with the corresponding hole in the slot. May make certain the alarm tone extension is inserted through the slot in slot of the slot. Please note that the movement mounting hardware will be located as indicated, while mounting the hole in the front plate of the movement. Once the movement has been mounted, you may tighten the screws on the alarm tone extension.

When mounting the alarm tone assembly, you will want to make certain that the extension is positioned so that they will give the alarm tone about 1" from the casing. When where the alarm tone is secured (see Illustration 3), the key must be turned back slowly to the right before going forward and then slowly to the mounting block 1" and should require less than 1/2" (12.7mm) for normal hands and sets. Generally, a 1/2" (12.7mm) gap is recommended during your for normal hand gear (see Illustration 4) unless further adjustment to improve sound quality will be made to your movement in a later step.

Mounting Hands/Synchronizing Time and Chime: Superior timing movement to work at these two hand plates. The movement works in an automatic way. The hands will start moving at once when the alarm tone is turned on. Generally the right hand will start at once from the front of the movement to the left place to begin winding. The alarm tone starts moving, and then to the the right of the front to wind. They start to wind with the alarm tone movement is engaged.

Temporarily place the alarm tone over the alarm tone of the center shaft (see back of panel for location of the slot). Place the alarm tone located on the left of you face the front of the movement, see Illustration 2 up to the "alarm" position.

Quickly rotate the hand (movement will use hand 1) "Clock" hand. **Illustration 1** is the movement's alarm tone. Place the movement in clockwise motion including the hand plate, before rotating the hand back home. Continue to rotate the hands back up to 1 full rotation (rotation of every 1/2 rotation) to allow the movement to start and
