

To produce a truly fine instrument like the new Les Paul Recording guitar, you need more than just fine materials. You need expert innovators, skilled craftsmen and knowledgeable engineers who know acoustics and electronics inside and out.

You also need a man who is an expert in the guitar field to advise and recommend features and specifications that will cause the finished product to be unique and distinctive.

Gibson long recognized as the world's leading guitar manufacturer, met these requirements when they combined their talents with the knowledgeable recommendations of a man who has come to be known to millions of music lovers as "Mr. Guitar" ... Les Paul.

The intercommunication and exchange of ideas between Gibson's engineers and the ingenious Les Paul brought about the birth

of the most revolutionary electric guitar on the market... the Les Paul Recording guitar by Gibson.

Low Impedance Pickups The Les Paul Recording is the only guitar on the market with two humbucking, low impedance pickups. These pickups offer a new concept in tonal response. The pickup height, in relation to the strings, has been carefully adjusted to produce maximum performance. Maintain the factory adjusted string setting for best results. The frequency response, tonalities and range of harmonics will exceed that of any electric guitar on the market to date.

Impedance Switch Your Les Paul Recording guitar is equipped with a unique switch that enables you to use either a "high" or "low" impedance amplifier without the use of a special transformer cable. In most cases, you will probably be using a high impedance guitar

amplifier. Be sure that your impedance switch is in the "Hi" position. In the event you are using a low impedance amplification system, your impedance switch must be in the "Lo" position.

CAUTION: if using a high impedance amplifier and your impedance switch is in the "Lo" position, you will experience a considerable loss in output level.

Pickup Selector Toggle Switch Activate the front pickup, the closest to the fingerboard, by moving the toggle switch to the front position. Move switch to rear position to activate the bridge or back pickup. The front pickup will produce the bass frequencies. The back pickup will produce treble frequencies. When the toggle switch is placed in the center position, both pickups will work simultaneously.

Master Volume Control Turn control clockwise to increase output level of either pickup (volume).
