Pizzini,2017-04-05 A self consistent model of point defects requires a reliable connection with the experimentally deduced structural spectroscopic and thermodynamic properties of the defect centres to allow their unambiguous identification This book focuses on the properties of defects in group IV semiconductors and seeks to clarify whether full knowledge of their chemical nature can account for several problems encountered in practice It is shown how difficult the fulfilment of self consistency conditions can be even today after more than four decades of dedicated research work especially in the case of compound semiconductors such as SiC but also in the apparently simple cases of silicon and germanium The reason for this is that the available microscopic models do not yet account for defect interactions in real solids *Proceedings of the 61st Conference of Metallurgists, COM 2022* Metallurgy & Materials Soc. of CIM,2023-01-05 These Proceedings represent the metallurgical engineering and materials science research presented at the 61st Annual Conference of Metallurgists The collection themed The Pathway to Net Zero presents findings on a wide range of topics including Processing of Critical Materials Towards Sustainable Circularity Mining to Materials Deep Decarbonization Pathways for Pyrometallurgical Processes Opportunities Challenges Energy and Environmental Materials Light Metals for the Transportation Industry Advances in Materials Manufacturing VI Existing and Emerging Materials Electrochemical Degradation of Multi component Materials Introduction to the Physics and Chemistry of Materials Robert J.
