design considerations by comparing the level of redundancy indexicality and complexity of each sonification design through the developed conceptual framework Overall this thesis offers motivated recommendations for the integration of sonification and visualization Med en kad m ngd och tillg ng till data och ett v xande krav p m nniskor i analys och beslutsprocesser finns det ett behov av att ytterligare utnyttja perceptuella och kognitiva f rm gor f r att underl tta dessa processer En metod f r att st dja i dessa uppgifter r att utnyttja fler sensoriska system till exempel h rseln f r att ka informationsfl det och f en mer omfattande f rst else av ett dataset eller situation samtidigt som fler sinnen involveras f r att engagera anv ndaren Audiovisuella datagr nssnitt g r det m jligt att distribuera datavariabler till vilket som helst av de tv sinnena f r att minska risken f r kognitiv verbelastning eller att lyfta fram specifika datavariabler genom att koppla dem till b da de sensoriska modaliteterna Hur framg ngsrikt ett audiovisuellt datagr nssnitt r beror p hur de tv sinnena integreras och hur detta utnyttjas i det resulterande gr nssnittet Den h r avhandlingen bidrar till forskningen om sonifiering genom att tillhandah lla en m nniskocentrerad integration av sonifiering och visualisering Det m nnisko centrerade tillv gag ngss ttet inneb r att man arbetar med dom nexperter och anv ndare under designprocessen av sonifieringen och att man skapar perceptuellt motiverade designer genom att utnyttja hur de auditiva och visuella systemen kompletterar varandra och hur de integreras i kognitionen f r meningsskapande Avhandlingen inneh ller sex studier som unders kte integrationen av sonifiering och visualisering vilket str ckte sig fr n litteratur versikter till designorienterade studier En state of the art rapport gav en versikt av integrationen av sonifiering och visualisering f r att erbjuda en introduktion till f llet f r nya och nuvarande ut vare I en annan studie utvecklades ett konceptuellt ramverk f r scenanalys som kan anv ndas som st d vid utformning och analys av audiovisuella datarepresentationer Resten av studierna var designorienterade d r de fokuserade p en specifik aspekt av hur sonifiering kan komplettera visualisering beroende p studiens dom n och uppgifter F rutom att ge konkreta exempel p audiovisuella integrationer r de viktigaste bidragen fr n studierna deras utv rderingsresultat i form av designrekommendationer Dessa inkluderar anv ndning av redundanta mappningar f r flerdimensionell dataanalys och beaktande av subjektiva skillnader hos dom nexperter f r st d till situationsmedvetenhet inom flygledning Studierna j mf rde ocks olika sonifieringsdesigner d r en studie visade en potentiell avv gning mellan att anv nda informativ eller behaglig design f r astronomisk vetenskapskommunikation medan en annan studie visade att en konkret sonifieringsdesign kan komplettera abstrakta visualiseringar Slutligen ger avhandlingen design verv ganden genom att j mf ra niv n av redundans indexikalitet och komplexitet f r varje sonifieringsdesign genom det utvecklade konceptuella ramverket Sammantaget ger denna avhandling motiverade rekommendationer f r integrering av sonifiering och visualisering

Physico-Chemical Control of Cell Function Cesare Gargioli, Giancarlo Forte, Alberto Rainer, 2019-10-17 Extracellular Matrix ECM has been considered for a long time merely a scaffold sustaining cell and tissue function Despite this simplistic view shared by many nowadays ECM and their mechanic physical and chemical characteristic acquired a progressive larger role actively regulating cell life survival proliferation gene expression and differentiation The interplay between cells and the ECM is continuously controlled at the cell level in a dynamic way While cells synthesize the raw components of the ECM this in turn

impacts on cell function by providing chemical topographical and mechanical hints Such stimuli have been proven to control several aspects of cell function including survival proliferation differentiation and migration The molecular pathways activated by cells in response to the physical cues arising from the ECM are being disclosed and thus the possibility to control cell function through materials design is becoming more realistic Current in vitro protocols relying in 2D cell culture system entail reductionist approaches to the complexity of cell ECM interaction and result in cells rapidly losing their distinctive functions in culture Understanding and replicating the 3D microenvironmental cues affecting cell function appears as a mandatory requirement for the development of next generation biomaterials as well as for the establishment of more physiologically relevant and predictive in vitro models of diseases Such an effort will require a multidisciplinary approach at the convergence of biophysics biology nanotechnology and bioengineering
