Basic Algebraic Geometry I.R. Shafarevich, 2012-12-06 Algebraic geometry occupied a central place in the mathematics of the last century The deepest results of Abel Riemann Weierstrass many of the most important papers of Klein and Poincare belong to this domain At the end of the last and the beginning of the present century the attitude towards algebraic geometry changed abruptly Around 1910 Klein wrote When I was a student Abelian functions as an after effect of Jacobi's tradition were regarded as the undisputed summit of mathematics and each of us as a matter of course had the ambition to forge ahead in this field And now The young generation hardly know what Abelian functions are Vorlesungen über die Entwicklung der Mathematik im XIX Jahrhundert Springer Verlag Berlin 1926 Seite 312 The style of thinking that was fully developed in algebraic geometry at that time was too far removed from the set theoretical and axiomatic spirit which then determined the development of mathematics Several decades had to lapse before the rise of the theory of topological differentiable and complex manifolds the general theory of fields the theory of ideals in sufficiently general rings and only then it became possible to construct algebraic geometry on the basis of the principles of set theoretical mathematics Around the middle of the present century algebraic geometry had undergone to a large extent such a reshaping process As a result it can again lay claim to the position it once occupied in mathematics
