The aerodynamic modelling is based on a variety of panel methods that take shadowing into account and it has been validated with flight and wind tunnel data of Apollo and the Space Shuttle. The shape optimization is combined with constrained trajectory analysis and the multi objective approach provides the engineer with a Pareto front of optimal shapes. The method detailed in Conceptual Shape Optimization of Entry Vehicles is straightforward and the output gives the engineer insight in the effect of shape variations on trajectory performance. All applied models and algorithms used are explained in detail allowing for reconstructing the design tool to the researcher's requirements. Conceptual Shape Optimization of Entry Vehicles will be of interest to both researchers and graduate students in the field of aerospace engineering and to practitioners within the aerospace industry.
