Strategic Cyber Deterrence Scott Jasper,2017-07-08 According to the FBI about 4000 ransomware attacks happen
every day In the United States alone victims lost 209 million to ransomware in the first quarter of 2016 Even worse is the
threat to critical infrastructure as seen by the malware infections at electrical distribution companies in Ukraine that caused
outages to 225 000 customers in late 2015 Further recent reports on the Russian hacks into the Democratic National
Committee and subsequent release of emails in a coercive campaign to apparently influence the U S Presidential Election
have brought national attention to the inadequacy of cyber deterrence The U S government seems incapable of creating an
adequate strategy to alter the behavior of the wide variety of malicious actors seeking to inflict harm or damage through
cyberspace This book offers a systematic analysis of the various existing strategic cyber deterrence options and introduces
the alternative strategy of active cyber defense It examines the array of malicious actors operating in the domain their
methods of attack and their motivations It also provides answers on what is being done and what could be done by the
government and industry to convince malicious actors that their attacks will not succeed and that risk of repercussions exists
Traditional deterrence strategies of retaliation denial and entanglement appear to lack the necessary conditions of capability
credibly and communications due to these malicious actors advantages in cyberspace In response the book offers the option
of adopting a strategy of active cyber defense that combines internal systemic resilience to halt cyber attack progress with
external disruption capacities to thwart malicious actors objectives It shows how active cyber defense is technically capable
and legally viable as an alternative strategy for the deterrence of cyber attacks Selected Technical Publications ,1974
