**Process Management as a Means for Greening Road Freight Transport** Priscilla Navarro, 2019-11-18 Research has proven that we need to reduce our environmental impact Sweden has set a goal to become fossil free by 2045 The increasing amount of transport and the need to reduce its environmental effects has put pressure on the companies of the road freight transport sector Therefore this business sector needs research actions to find tools that will assist in the greening of its services and operations My research is a contribution to these efforts from a managerial point of view Process management is a methodology taken from Total Quality Management TQM that has been used in several business sectors to improve business performance Its process orientation and focus on customers allow companies to identify and satisfy the current and latent needs of their customers Until now TQM has targeted customer needs However it is experiencing a shift towards incorporating societal needs into the equation Environmental sustainability is becoming a societal requirement for companies in all sectors Hence the purpose of my research is to explore the possibilities of using process management to support the greening of small and medium sized companies within the road freight transport sector The frame of reference for my study is based on three well established domains in academia and their intersections These domains are process management road freight transport and environmental sustainability I have used qualitative methods for my research Specifically I performed a

case study at two medium sized Swedish companies within the road freight transport business sector The data collection methods involved document studies observations and interviews at each case company The case study was performed using an action research approach which involved setting up meetings seminars and workshops with each case company Additionally joint workshops were performed which allowed me to observe and obtain results from the interactions between the companies The analysis is presented for each case separately and then for their interactions The results are compared with the existing literature from the three domains I based my research on three research questions The first was intended to identify the principles and tools within process management that may be applied to road freight transport companies interested in implementing this methodology to enhance their environmental sustainability I concluded that these principles were present in the companies and are needed for the implementation of process management The tools included in this methodology can be associated with environmental initiatives performed by the companies in support of their greening The second research question refers to the benefits and challenges that companies in this business sector may face when implementing process management methodology I conclude that most of the expected benefits of process management were confirmed Additionally a new benefit was observed reducing the environmental effect of their services can interest current customers and attract new customers to road freight transport companies The challenges identified during the case study include resistance to change lack of knowledge and resource allocation limitations I also confirmed that a stepwise implementation of process management increases the likelihood of the success of the methodology Hence underdeveloped management systems are also a challenge when this methodology is used in freight transport companies The third and final research question involves the adaptations required for process management to enhance environmental sustainability in companies in this business sector I refer to each of the challenges found and suggest certain requirements for the companies to apply this methodology Clear communication from top management the training of employees and the involvement of all employees are some of these requirements Moreover to incorporate the environmental aspects clearly I suggest environmental efforts for each step in the implementation of process management By including these efforts in the process maturity model I conclude that road freight transport companies could use process management as a means of enhancing environmental sustainability

Forskning har visat att vi måste minska vår miljöbelastning Sverige har som mål att vara fossilfritt 2045 Den ökande mängden transporter och behovet av att sänka miljöbelastningen har en direkt påverkan på godstransportsektorn Därför behövs forskningsinsatser riktade mot dessa frågor att hitta verktyg som hjälper till att minska miljöbelastningen av dess verksamhet och tjänster Min forskning är ett bidrag till dessa ansatser ur ett ledningsperspektiv Processledning är en metodik inom Total Quality Management TQM som har använts i flera branscher för att förbättra affärsresultat

Processorientering och fokus på kunderna gör att företaget kan identifiera och tillfredsställa aktuella och latenta behov från deras kunder Fram till idag så har TQM siktat in sig på kundbehov men just nu pågår en flyttning inom TQM mot att även inkludera

samhällsbehov i ekvationen Miljömåttet som ett krav för att bli ett samhällsligt krav för företag inom alla branscher. Därför syftade min forskning att utforska möjligheterna av att använda processledning som ett verktyg för att minska miljöpåverkan av små och medelstora företag inom godstransportbranschen. Min studie baseras på tre valtabellerade områden inom akademien och deras överlapp. Områdena är processledning, godstransporter och miljömåttet. Jag har använt kvalitativa metoder för min forskning. Specifikt genomfördes en fallstudie vid två medelstora svenska företag inom godstransportbranschen. Datainsamlingsmetoder som användes var dokumentstudier, observationer samt intervjuer hos båda företagen. Fallstudien genomfördes med en aktionsforskningsapproach. Aktionsforskningen genomfördes som åtta seminarier och workshops hos varje företag. Dessutom genomfördes gemensamma workshops med företagen vilket gjorde det möjligt att observera och få resultat utifrån samspelet mellan företagen. Analysen presenteras för varje företag separat och därefter utifrån deras samspel. Resultaten jämfördes med existerande litteratur ifrån de tre områdena. Min forskning utgår ifrån tre frågeställningar. Syftet med den första var att identifiera principerna och verktygen inom processledning som kan appliceras på godstransportföretag som är intresserade av att implementera metodiken för att öka sin miljömått och hållbarhet. Jag drog slutsatsen att principerna för processledning fanns inom företagen och dom behövde för implementeringen av processledningen. Verktygen inom den här metodiken kan associeras med miljöinitiativ utifrån av företagen och minska deras miljöpåverkan. Den andra frågeställningen avser föreläggarna samt utmaningarna som företag inom det här området möter när de implementerar processledningsmetodiken. Min slutsats är att de flesta av de förväntade föreläggarna med processledning bekräftas samt att ytterligare en ny föreläggare upptäcktes. En minskad miljöpåverkan av deras tjänster kan intressera nuvarande kunder och dra till sig nya. De identifierade utmaningarna från fallstudien inkluderar motstånd mot förändring, avsaknad av kunskap samt resursbegränsningar. Jag bekräftade även att en stegvis implementering av processledning kan möjliggöra för att metodiken ska bli framgångsrik. Därför är också underutvecklade ledningssystem en utmaning för att kunna använda den här metodiken inom godstransportföretag. Den tredje och sista frågeställningen berör de anpassningarna av processledning som krävs för att kunna öka miljömått och hållbarhet hos företag inom det här området. Jag refererar till var och en av de utmaningar som hittades och föreslår vissa krav för företagen att applicera den här metodiken. Tydlig kommunikation ifrån ledningen, utbildning av anställda och involvering av alla medarbetare är en del av dessa krav. Dessutom för att integrera miljöaspekten tydligt så föreslår jag miljöarbete för varje steg av implementeringen av processledning. Jag drar slutsatsen att godstransportföretag skulle kunna använda processledning som ett sätt att öka miljömått och hållbarhet.
