## ABSTRACT

*Objective:* This paper describes how and why to write a case report for publication in a peer-reviewed journal.

*Methods:* PubMed, the Cumulative Index to Nursing and Allied Health Literature (CINAHL), and the Index to Chiropractic Literature were searched from 2000 through September 2006 using the following search terms: case report, authorship, peer review, and manuscript. Relevant manuscripts were retrieved and the results were used to update a previous narrative overview of the literature.

*Discussion:* Commensurate with the increased use of evidence-based health care and recent changes in publication requirements, new standards are expected of case reports. Case reports should present new information to the literature and be written succinctly. The types of case reports available are discussed. Steps for preparing a case report are described based upon the current available literature.

*Conclusion:* Case reports are important contributions to the health sciences literature. Proper preparation of this study design is necessary in order for it to be published. A self-evaluation check sheet for authors is included to assist in the writing process. (*J Chiropr Med* 2006;5:72–82)

**Key Indexing Terms:** Case Report; Authorship; Peer Review; research; Manuscripts.

## INTRODUCTION

The clinical case report, which describes and analyzes the diagnosis and/or management of 1 or 2 patients, is the first line of evidence in health care.<sup>1,2,3</sup> Case reports have been used for years as a means to teach health sciences students,<sup>2,4</sup> are one of the best ways for authors to get started in scholarly writing,<sup>2,5,6</sup> and can be a valuable learning experience for both author and reader.<sup>7</sup>

As valuable as the case report might be, many journals no longer publish this study design for a variety

of reasons. Past abuses in authorship<sup>2</sup> culminated in the demise of the case report in some journals. Some journals no longer publish cases because of the low level of general application to the practice of evidence-based care since case reports have certain inherent limitations.<sup>2,8,9,10,11</sup> Some cases add little to the body of scientific knowledge and this is cited as a reason for discontinuing the publishing of cases.<sup>12</sup> Other factors include the limited page space within a journal that tends to be dedicated to experimental studies, and the diminutive effect case reports have on a journal's impact factor.<sup>13</sup> Thus,

## **How Write Case Report:**

Writing Case Reports Clifford D. Packer, Gabrielle N. Berger, Somnath Mookherjee, 2016-11-02 This book provides medical students and physicians with a practical step by step guide on how to write and publish a medical case report The case report is the traditional way for physicians to describe their unique or unusual cases to a broad audience and it plays an important role in the discovery of new diseases or syndromes unusual manifestations of disease important adverse drug reactions and the generation of hypotheses for further study This book guides readers through the process from choosing a case to report on to finding a publisher and then comment on future directions and potential new uses of case reports including expanded computer case databases to optimize care for individual patients and new applications in medical education Interspersed throughout the text are example case reports many written by the authors with commentary on their experiences working with those reports to provide context and aid readers in creating clear concise and useful case reports

**Planning Your Research And How To Write It** Abdul Aziz Nather, 2015-10-21 This book is a practical guide for residents and young researchers who are planning to embark on research It details the significant planning one must first do including choosing a suitable experienced clinician as a supervisor sourcing for a winning idea with significant clinical impact performing a proper review of literature defining clearly the objectives to be set and adopting the appropriate methodology Statistical evaluation must be done from the start of the research to define adequate sample size and also for evaluation of the results It also advises how one should draw upon relevant and appropriate conclusions from the results obtained The ethics of research is also discussed An all important factor in research is the procurement of research grants Readers are guided how to write a proper research proposal to secure these much needed grants Many research papers end up as presentations only in local or international conferences An important additional objective of this book is to guide young researchers how to write their finished product as a publication in an important international refereed journal or as a thesis Chapters have been specially written with tips for scientific writing selecting the right journal writing for an original article for a journal a review article a case report as well as for a thesis Tips are also written on what reviewers of a journal look for in an article as well as what examiners look for in a thesis

**How to Write Better Medical Papers** Michael Hanna, 2019-03-20 This book guides medical researchers through all stages of transforming their scientific data and ideas into a published paper Many researchers in medicine including the life sciences and health sciences struggle to get their research written and published Manuscripts are typically rejected and or sent back for revisions several times before ever being published One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers research methodology ethics statistics data visualization writing revising and the practicalities of publishing Instead of wasting the reader's time discussing trivialities of punctuation spelling etc this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals The section Preparing covers the

range of methodological ethical and practical aspects that researchers need to address before starting to write their paper The section Analyzing reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author's decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life sciences or health sciences
