Mathematical Methods for Signal and Image Analysis and Representation Luc Florack, Remco Duits, Geurt Jongbloed, Marie-Colette van Lieshout, Laurie Davies, 2012-01-12 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception Mathematical Foundations of Computer Science 1988 Michal Chytil, Ladislav Janiga, Václav Koubek, 1988 This volume contains 11 invited lectures and 42 communications presented at the 13th Conference on Mathematical Foundations of Computer Science MFCS 88 held at Carlsbad Czechoslovakia August 29 September 2 1988 Most of the papers present material from the following four fields complexity theory in particular structural complexity concurrency and parallelism formal language theory semantics Other areas treated in the proceedings include functional programming inductive syntactical synthesis unification algorithms relational databases and incremental attribute evaluation *Computer Network Security* Vladimir Gorodetsky, Igor Kotenko, Victor Skormin, 2005-09-19 This volume contains papers presented at the 3rd International Workshop on Mathematical Methods Models and Architectures for Computer Network Security MMM ACNS 2005 held in St Petersburg Russia during September 25 27 2005 The workshop was organized by the St Petersburg Institute for Informatics and Automation of the Russian Academy of Sciences SPIIRAS in cooperation with Binghamton University SUNY USA The 1st and the 2nd International Workshops on Mathematical Methods Models and Architectures for Computer Network Security MMM ACNS 2001 and MMM ACNS 2003 hosted by the St Petersburg Institute for Informatics and Automation demonstrated the keen interest of the international research community in the subject area It was recognized that conducting a biannual series of such workshops in St Petersburg stimulates fruitful exchanges between the different schools of thought facilitates the dissemination of new ideas and promotes the spirit of cooperation between researchers on the international scale MMM ACNS 2005 provided an international forum for sharing original search results and application experiences among specialists in fundamental and applied problems of computer network security An important distinction of the workshop was its focus on mathematical aspects of information

and computer network security addressing the ever increasing demands for secure computing and highly dependable computer networks *Energy Minimization Methods in Computer Vision and Pattern Recognition* Xue-Cheng Tai, Egil Bae, Tony F. Chan, Marius Lysaker, 2015-01-07 This volume constitutes the refereed proceedings of the 10th International Conference on Energy Minimization Methods in Computer Vision and Pattern Recognition EMMCVPR 2015 held in Hong Kong China in January 2015 The 36 revised full papers were carefully reviewed and selected from 45 submissions The papers are organized in topical sections on discrete and continuous optimization image restoration and inpainting segmentation PDE and variational methods motion tracking and multiview reconstruction statistical methods and learning and medical image analysis **Automated Practical Reasoning** Jochen Pfalzgraf, Dongming Wang, 2012-12-06 This book is a collection of selected papers written by researchers of our RISC institute Research Institute for Symbolic Computation along with the ESPRIT MEDLAR Project Mechanizing Deduction in the Logics of Practical Reasoning Naturally the MEDLAR Project was and is the focal point for our institute whose main objective is the combination of foundational research in the area of symbolic computation and possible applications thereof for high tech industrial projects I am grateful to the director of the MEDLAR project Jim Cunningham for his enthusiasm profound expertise and continuous effort to manage a fruitful cooperation between various European working groups in the area of the project and for giving us the opportunity to be part of this challenging endeavor I also acknowledge and feel indebted to Jochen Pfalzgraf for managing the RISC part of the MEDLAR project and to both him and Dongming Wang for editing this volume and organizing the refereeing process

Developments in the Visualization and Processing of Tensor Fields David H. Laidlaw, Anna Vilanova, 2012-09-14

Bringing together key researchers in disciplines ranging from visualization and image processing to applications in structural mechanics fluid dynamics elastography and numerical mathematics the workshop that generated this edited volume was the third in the successful Dagstuhl series Its aim reflected in the quality and relevance of the papers presented was to foster collaboration and fresh lines of inquiry in the analysis and visualization of tensor fields which offer a concise model for numerous physical phenomena Despite their utility there remains a dearth of methods for studying all but the simplest ones a shortage the workshops aim to address Documenting the latest progress and open research questions in tensor field analysis the chapters reflect the excitement and inspiration generated by this latest Dagstuhl workshop held in July 2009 The topics they address range from applications of the analysis of tensor fields to purer research into their mathematical and analytical properties They show how cooperation and the sharing of ideas and data between those engaged in pure and applied research can open new vistas in the study of tensor fields

D'Agostino, Dov M. Gabbay, Reiner Hähnle, J. Posegga, 2013-03-09 Recent years have been blessed with an abundance of logical systems arising from a multitude of applications A logic can be characterised in many different ways Traditionally a logic is presented via the following three components 1 an intuitive non formal motivation perhaps tie it in to some application area 2 a semantical interpretation 3 a proof theoretical formulation There are several types of proof theoretical methodologies Hilbert style Gentzen style goal directed style labelled deductive system style and so on The tableau methodology invented in the 1950s by Beth and Hintikka and later perfected by Smullyan and Fitting is today one of the most popular since it appears to bring together the proof theoretical and the semantical approaches to the pre of a logical system and is also very intuitive In many universities it is sentation the style first taught to students Recently interest in tableaux has become more widespread and a community crystallised around the subject An annual tableaux conference is being held and proceedings are published The present volume is a Handbook a Tableaux pre
