Mathematics for Dynamic Modeling Edward Beltrami, 2014-05-10 Mathematics for Dynamic Modeling provides an introduction to the mathematics of dynamical systems This book presents the mathematical formulations in terms of linear and nonlinear differential equations Organized into two parts encompassing nine chapters this book begins with an overview of the notions of equilibrium and stability in differential equation modeling that occur in the guise of simple models in the plane This text then focuses on nonlinear models in which the limiting behavior of orbits can be more complicated Other chapters consider the problems that illustrate the concepts of equilibrium and stability limit cycles chaos and bifurcation This book discusses as well a variety of topics including cusp catastrophes strange attractors and reaction diffusion and shock phenomena The final chapter deals with models that are based on the notion of optimization This book is intended to be suitable for students in upper undergraduate and first year graduate course in mathematical modeling

Modeling Dynamic Biological Systems Bruce Hannon, Matthias Ruth, 2012-12-06 Models help us understand the dynamics of real world processes by using the computer to mimic the actual forces that are known or assumed to result in a system's behavior This book does not require a substantial background in mathematics or computer science

Dynamic Modeling of Diseases and Pests Bruce Hannon, Matthias Ruth, 2008-10-16 The ease of use of the programs in the application to ever more complex cases of disease and pestilence The lack of need on the part of the student or modelers of mathematics beyond algebra and the lack of need of any prior computer programming experience The surprising insights that can be gained from initially simple systems models

Dynamic Modeling for Marine Conservation Matthias Ruth, James Lindholm, 2012-12-06 The effects of disturbed ecosystems from devastating algal blooms to the loss of whale populations have demonstrated the vulnerability of the oceans biodiversity This book provides methods for learning how ocean systems function how natural and human actions put them in peril and how we can influence the marine world in order to maintain

biodiversity The difficulties of research in the oceans make computer modeling particularly helpful for marine conservation The authors demonstrate dynamic modeling through the use of the STELLA modeling program and case studies from marine conservation

The Art of Modeling Dynamic Systems Foster Morrison, 2012-03-07 This text illustrates the roles of statistical methods coordinate transformations and mathematical analysis in mapping complex unpredictable dynamical systems It describes the benefits and limitations of the available modeling tools showing engineers and scientists how any system can be rendered simpler and more predictable Written by a well known authority in the field this volume employs practical examples and analogies to make models more meaningful The more universal methods appear in considerable detail and advanced dynamic principles feature easy to understand examples The text draws careful distinctions between mathematical abstractions and observable realities Additional topics include the role of pure mathematics the limitations of numerical methods forecasting in the presence of chaos and randomness and dynamics without calculus Specialized techniques and case histories are coordinated with a carefully selected and annotated bibliography The original edition was a Library of Science Main Selection in May 1991 This new Dover edition features corrections by the author and a new Preface

Bergethon, 2013-03-14 The objective of this book is to provide a unifying approach to the study of biophysical chemistry for the advanced undergraduate who has had a year of physics organic chemistry calculus and biology This book began as a revised edition of Biophysical Chemistry Molecules to Membranes which Elizabeth Simons and I coauthored That short volume was written in an attempt to provide a concise text for a one semester course in biophysical chemistry at the

graduate level The experience of teaching biophysical chemistry to biologically oriented students over the last decade has made it clear that the subject requires a more fundamental text that unifies the many threads of modern science physics chemistry biology mathematics and statistics This book represents that effort This volume is not a treatment of modern biophysical chemistry with its rich history and many controversies although a book on that topic is also needed The Physical Basis of Biochemistry is an introduction to the philosophy and practice of an interdisciplinary field in which biological systems are explored using the quantitative perspective of the physical scientist I have three primary objectives in this volume one to provide a unifying picture of the interdisciplinary threads from which the tapestry of biophysical studies is woven two to provide an insight into the power of the modeling approach to scientific investigation and three to communicate a sense of excitement for the activity and wholesome argument that characterize this field of study

Environment and Sustainable Development M.H. Fulekar, Bhawana Pathak, R K Kale, 2013-10-04 Global society in the 21st century is facing challenges of improving the quality of air water soil and the environment and maintaining the ecological balance Environmental pollution thus has become a major global concern The modern growth of industrialization urbanization modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs which has contributed in disturbing the ecological balance on which the quality of our environment depends Human beings in the truest sense are the product of their environment The man environment relationship indicates that pollution and deterioration of the environment have a social origin The modern technological advancements in chemical processes operations have generated new products resulting in new pollutants in such abundant levels that they are above the self cleaning capacity of the environment One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment Sustainable development envisages the use of natural resources such as forests land water and fisheries in a sustainable manner without causing changes in our natural world The Rio de Janeiro Earth Summit held in Brazil in 1992 focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment This book will be beneficial as a source of educational material to post graduate research scholars teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development

A Survey of Models for Tumor-Immune System Dynamics John A. Adam, Nicola Bellomo, 2012-10-06

Mathematical Modeling and Immunology An enormous amount of human effort and economic resources has been directed in this century to the fight against cancer The purpose of course has been to find strategies to overcome this hard challenging and seemingly endless struggle We can readily imagine that even greater efforts will be required in the next century The hope is that ultimately humanity will be successful success will have been achieved when it is possible to activate and control the immune system in its competition against neoplastic cells Dealing with the above mentioned problem requires the fullest possible cooperation among scientists working in different fields biology immunology medicine physics and we believe mathematics Certainly biologists and immunologists will make the greatest contribution to the research However it is now increasingly recognized that mathematics and computer science may well be able to make major contributions to such problems We cannot expect mathematicians alone to solve fundamental problems in immunology and in particular cancer research but valuable support however modest can be provided by mathematicians to the research aspirations of biologists and immunologists working in this field

Control Theory Methods in Economics Jati Sengupta, Phillip

Fanchon, 2012-12-06 Control theory methods in economics have historically developed over three phases The first involved basically the feedback control rules in a deterministic framework which were applied in macrodynamic models for analyzing stabilization policies The second phase raised the issues of various types of inconsistencies in deterministic optimal control models due to changing information and other aspects of stochasticity Rational expectations models have been extensively used in this plan to resolve some of the inconsistency problems The third phase has recently focused on the various aspects of adaptive control where stochasticity and information adaptivity are introduced in diverse ways e g risk adjustment and risk sensitivity of optimal control recursive updating rules via Kalman filtering and weighted recursive least squares and variable structure control methods in nonlinear framework Problems of efficient econometric estimation of optimal control models have now acquired significant importance This monograph provides an integrated view of control theory methods synthesizing the three phases from feedback control to stochastic control and from stochastic control to adaptive control

Aspects of econometric estimation are strongly emphasized here since these are very important in empirical applications in economics

Nonlinear Dynamics In Human Behavior William Sulis, A Combs, 1996-09-20 This book represents a selection of papers presented at the Fourth Annual Conference of the Society for Chaos Theory in Psychology and the Life Sciences held at Johns Hopkins University in Baltimore June 24-27 1995 The book reflects the Society as a whole consisting of applications of nonlinear methodology in psychophysics neurophysiology business and social science as well as applications of the nonlinear paradigm to issues arising in psychotherapy and the study of creativity Unique are contributions on the use of Boolean networks in the study of psychosis and quality of life Review articles on the appropriate use of time series methods in psychology and psychophysics provide a valuable reference

The Macrodynamics of Capitalism Peter Flaschel, 2008-12-11 This book provides an introduction to advanced macrodynamics viewed as a disequilibrium theory of actual growth It builds on an earlier attempt to reformulate the foundations of macroeconomics from the perspective of real markets disequilibrium and the conflict over income distribution between capital and labor It does so not because it wants to support the view that this class conflict is inevitable but with the perspective that an understanding of this conflict may help to formulate socio-economic principles and policies that can help to overcome class conflict at least in its cruder forms or that can even lead to rationally understandable procedures and rules that turn this conflict into a consensus-driven interaction between capitalists or their representatives and the employable workforce The book starts from established theories of temporary equilibrium positions the forces of real growth and the conflict over income distribution represented by basic modeling approaches which it considers in detail in its Part I in order to prepare the ground for their integration in Part II of the book In this way we inspect what types of models of disequilibrium income distribution and real growth we have at our disposal as models that have proved to be of real interest and sound from a rigorous modeling perspective
