

12. **True.** When a regressor has large variability in its values, $\sum (X_i - \bar{X})^2$ would be large, leading to small variance or standard error of the estimates (they are estimated with high precision).
13. **True.** As $t = \frac{\hat{\beta} - \beta}{se(\hat{\beta})}$
When $se(\hat{\beta})$ is large, t would be small, so the probability of not rejecting the null hypothesis (where it may be false) increases which is called type II error.
14. **True.** As it would decrease the degree of collinearity, leading to small standard error and hence significant coefficients, but take care of the misspecification problem which arises due to excluding relevant variables according to the theory and this problem leads to biased estimates.
15. **True.** As $VIF = \frac{1}{1 - R_j^2}$
When $R_j^2 = 0.9$, $VIF = \frac{1}{0.1} = 10$
So $VIF > 10$, when $R_j^2 > 0.9$ *very high correlation.*
16. **False.** As $TOL = \frac{1}{VIF} = 1 - R_j^2$
When R_j^2 approaches 1, TOL would converge to zero.
17. **False.** They are counterpart to each other.
18. **False.** As in the case of severe multicollinearity, the R^2 would be relatively high while all or some of the partial slope coefficients are individually statistically insignificant on the basis of the usual t test.

Problem 2: Questions

- a. The following are the steps to detect multicollinearity:
1. High R^2 and insignificant coefficients.
 2. The signs of the coefficients are opposite to the expected signs.
 3. The t -ratio of the coefficients is small.
 4. The F -ratio is high but the t -ratio is small.
- b. To detect multicollinearity, the following steps are followed:
1. High R^2 and insignificant coefficients.
 2. The signs of the coefficients are opposite to the expected signs.
 3. The t -ratio of the coefficients is small.
 4. The F -ratio is high but the t -ratio is small.

Handbook of Nature-Based Solutions to Mitigation and Adaptation to Climate Change Gustavo J. Nagy, Desalegn Yayeh Ayal, 2025-11-04 Over recent years nature based solutions NbS have gained popularity as tools to

ameliorate the effects of climate change while slowing down the global warming process More specifically the potential of NbS has been explored in terms of meeting greenhouse gas emissions targets and fostering climate change adaptation NbS are methods that use and enhance nature to improve social and environmental challenges They involve several multifaceted actions that work sustainably to restore and protect the natural environment while helping people Therefore these solutions are useful in climate change adaptation and mitigation There are 3 main areas which NbS may target namely reducing exposure reducing sensitivity and supporting adaptive capacity Reducing exposure refers to protecting areas from existing climate change effects There is thus a perceived need to document and promote experiences related to NbS and to apply these in different contexts It is against this background that the Handbook of Nature Based Solutions to Mitigation and Adaptation to Climate Change is being produced The publication will showcase experiences related to NbS from around the world In particular it will gather examples of projects studies and the latest thinking on NbS which can serve the purpose of inspiring and fostering further works in this key area Thanks to its scope and thematic diversity the book will be of special interest to representatives from government organisations researchers and students from a wide range of natural and social sciences courses It will also provide useful information to practitioners and representatives from non governmental organisations
