IMPORTANT: On 30HK,HL 2-compressor units, the **SEQUENCE** switch on the control panel must be in the 1-2 position to obtain hot gas bypass operation.

Run the conduit from the bypass valve to one of the knockouts provided on the right side of the unit control box. Connect the control wires as shown in Fig. 7.

OPERATION AND ADJUSTMENT

The bypass valve is factory set to begin opening when suction pressure drops to about 62 psig. This pressure corresponds to a **chilled** water controller set point of approximately 44 F. If the chilled water set point is lower than 44 F, it will be necessary to decrease the bypass valve setting for proper operation. Conversely, for **chilled** water set points above 44 F, the bypass valve setting must be increased. A change in condensing temperature will also require a change in bypass valve set point. As condensing temperature decreases, decrease the bypass valve set point until it opens at the desired conditions.

See Combined Legend.

Refer to unit wiring label inside front access door for complete wiring schematic.
