Ramanujan's Notebooks Bruce C. Berndt, 2012-12-06 Srinivasa Ramanujan is arguably the greatest mathematician that India has produced His story is quite unusual although he had no formal education in mathematics he taught himself and managed to produce many important new results With the support of the English number theorist G H Hardy Ramanujan received a scholarship to go to England and study mathematics He died very young at the age of 32 leaving behind three notebooks containing almost 3000 theorems virtually all without proof G H Hardy and others strongly urged that notebooks be edited and published and the result is this series of books This volume deals with Chapters 1-9 of Book II each theorem is either proved or a reference to a proof is given **Ω-Bibliography of Mathematical Logic** Heinz-Dieter Ebbinghaus, 2013-06-29 Gert H Moller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistication specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature particularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature he may not be able to find it even by

searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra

The Working Papers of Hugo Grotius Martine Julia van Ittersum, 2024-05-27 The Working Papers of Hugo Grotius is the first full length study of the handwritten documents initially used by the author of *Mare Liberum* 1609 and *De Jure Belli ac Pacis* 1625 in his day to day activities as a scholar lawyer and politician but subsequently incorporated into his own or other archives Martine van Ittersum reconstructs a process of transmission dispersal and loss that started during Grotius lifetime and ended with the papers auction in 1864 This is also a study of archival afterlives Our understanding of Grotius life and work is shaped by the conscious decisions of previous generations to retain or discard documents frequently for the sake of individual lives and careers family honour and or larger political and religious ends

There are many technical and popular accounts both in Russian and in other languages of the non Euclidean geometry of Lobachevsky and Bolyai a few of which are listed in the Bibliography This geometry also called hyperbolic geometry is part of the required subject matter of many mathematics departments in universities and teachers colleges a reflection of the view that familiarity with the elements of hyperbolic geometry is a useful part of the background of future high school teachers Much attention is paid to hyperbolic geometry by school mathematics clubs Some mathematicians and educators concerned with reform of the high school curriculum believe that the required part of the curriculum should include elements of hyperbolic geometry and that the optional part of the curriculum should include a topic related to hyperbolic geometry I The broad interest in hyperbolic geometry is not surprising This interest has little to do with mathematical and scientific applications of hyperbolic geometry since the applications for instance in the theory of automorphic functions are rather specialized and are likely to be encountered by very few of the many students who conscientiously study and then present to examiners the definition of parallels in hyperbolic geometry and the special features of configurations of lines in the hyperbolic plane The principal reason for the interest in hyperbolic geometry is the important fact of non uniqueness of geometry of the existence of many geometric systems **The Athenaeum**, 1850
