Rudolf V. B. Rucker, 1977 Exposition of fourth dimension concepts of relativity as Flatland characters continue adventures Topics include curved space time as a higher dimension special relativity and shape of space time Includes 141 illustrations

The Fourth Dimension Rudy von Bitter Rucker, Rudy Rucker, 1985 A detailed description of what the fourth dimension would be like **The Fourth Dimension: Toward a Geometry of Higher Reality** Rudy Rucker, 2014-09-17 One of the

most talented contemporary authors of cutting edge math and science books conducts a fascinating tour of a higher reality the Fourth Dimension Includes problems puzzles and 200 drawings Informative and mind dazzling Martin Gardner [The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition](#) Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak **Flatland** Edwin Abbott, 2009-11-13 Flatland 1884 is an influential mathematical fantasy that simultaneously provides an introduction to non Euclidean geometry and a satire on the Victorian class structure issues of science and faith and the role of women A classic of early science fiction the novel takes place in a world of two dimensions where all the characters are geometric shapes The narrator A Square is a naive respectable citizen who is faced with proof of the existence of three dimensions when he is visited by a sphere and is forced to see the limitations of his world The introduction to this Broadview Edition provides context for the book s references to Victorian culture and religion

mathematical history and the history of philosophy The appendices contain contemporary reviews extracts from the work of fellow mathematical fantasy writer mathematician Charles Hinton Hermann von Helmholtz s *The Axioms of Geometry* 1870 and autobiographical passages from Abbott s *The Kernel and the Husk* 1886 *Shadows of Reality* Tony Robbin,2008-10-01 In this insightful book which is a revisionist math history as well as a revisionist art history Tony Robbin well known for his innovative computer visualizations of hyperspace investigates different models of the fourth dimension and how these are applied in art and physics Robbin explores the distinction between the slicing or Flatland model and the projection or shadow model He compares the history of these two models and their uses and misuses in popular discussions Robbin breaks new ground with his original argument that Picasso used the projection model to invent cubism and that Minkowski had four dimensional projective geometry in mind when he structured special relativity The discussion is brought to the present with an exposition of the projection model in the most creative ideas about space in contemporary mathematics such as twistors quasicrystals and quantum topology Robbin clarifies these esoteric concepts with understandable drawings and diagrams Robbin proposes that the powerful role of projective geometry in the development of current mathematical ideas has been long overlooked and that our attachment to the slicing model is essentially a conceptual block that hinders progress in understanding contemporary models of spacetime He offers a fascinating review of how projective ideas are the source of some of today s most exciting developments in art math physics and computer visualization [The Universal Book of Mathematics](#) David Darling,2008-04-21 Praise for David Darling *The Universal Book of Astronomy* A first rate resource for readers and students of popular astronomy and general science Highly recommended Library Journal A comprehensive survey and a rare treat Focus *The Complete Book of Spaceflight* Darling s content and presentation will have any reader moving from entry to entry *The Observatory magazine* Life Everywhere This remarkable book exemplifies the best of today s popular science writing it is lucid informative and thoroughly enjoyable Science Books Films An enthralling introduction to the new science of astrobiology Lynn Margulis *Equations of Eternity* One of the clearest and most eloquent expositions of the quantum conundrum and its philosophical and metaphysical implications that I have read recently The New York Times *Deep Time* A wonderful book The perfect overview of the universe Larry Niven **The Oxford Book of Children's Verse in America** Donald Hall,1985 Companion volume to *The Oxford book of children s verse* [The Shape of Space](#) Jeffrey R. Weeks,2001-12-12 Maintaining the standard of excellence set by the previous edition this textbook covers the basic geometry of two and three dimensional spaces Written by a master expositor leading researcher in the field and MacArthur Fellow it includes experiments to determine the true shape of the universe and contains illustrated examples and engaging exercises that teach mind expanding ideas in an intuitive and informal way Bridging the gap from geometry to the latest work in observational cosmology the book illustrates the connection between geometry and the behavior of the physical universe and explains how radiation remaining from the big bang may reveal the actual shape of the universe
