

File Transfer Protocol

File Transfer Protocol (FTP) allows you to move files between any computers that support the TCP/IP-standard FTP protocols—mainframes, midrange systems, PC servers, and desktop systems. FTP is the name of the application and the protocol that allows you to transfer files in a TCP/IP network. This chapter focuses on the FTP functions that are available in the z/OS Communications Server. The FTP protocol uses a client/server model and the z/OS Communications Server ships with both an FTP server (FTPD) and an FTP client.

This chapter discusses the following FTP topics.
