Unification of the Fundamental Particle Interactions II John Ellis, 2012-12-06 Work on the unification of the fundamental particle interactions has continued vigorously since the first Europhysics study Conference on this subject At that time we emphasized the existence of two main approaches one based on supersymmetry and possibly its local version supergravity and the other approach based on grand unified gauge theories Discussion of the possible tests of these theoretical speculations included experiments on baryon decay and neutrino oscillations In view of the uncertainties surrounding the observability of such phenomena the early Universe was welcomed as a possible Laboratory for testing new theoretical ideas At that time we expressed the hope that the different gauge and supersymmetry approaches would cross fertilize each other and it is appropriate to ask now how much of that hope has been realized We believe there has recently been considerable theoretical rapprochement which is amply reflected in these Proceedings On the one hand it has been realized that many of the technical problems in grand unified gauge theories such as arranging the hierarchy of different mass scales may be alleviated using simple global supersymmetry On the other hand there has been growing interest in the possibility that extended supergravity theories may furnish a suitable framework for the unification of all the fundamental particle interactions Many physicists in fact now

question actively whether the known fundamental particles are in deed elementary or whether they are composite **Social Sciences and Interdisciplinary Behavior** Ford Lumban Gaol,Fonny Hutagalung,Nailya Bagautdinova,Lenar Safiullin,2016-09-19 Social Sciences and Interdisciplinary Behavior contains papers that were originally presented at the 4th International Congress on Interdisciplinary Behavior and Social Science 2015 ICIBSoS 2015 held 22 23 October 2015 at The Institute of Management Economics and Finance of the Kazan Federal University Kazan Russia and 7 8 November 2015 in Arya Duta Hotel Jakarta Indonesia The contributions deal with various interdisciplinary research topics particularly in the fields of social sciences education economics and arts The papers focus especially on such topics as language cultural studies economics behavior studies political sciences media and communication psychology and human development **Universal Access in Human-Computer Interaction. High and Low Cultures Reinhold Grimm,Jost Hermand,1994 As the editors write in this volume while the dichotomy of high and low classical and popular elitist and trivial has occupied theorists of culture for centuries very few of them have paid more than scant attention to the various attempts at mediating between these two levels of cultural endeavor The essays collected here most delivered at the twenty second Wisconsin Workshop in October 1991 address exactly this aspect of cultural studies using modern Germany as their canvas The contributors range across the entire breadth of German cultural life analyzing developments in the arts literature poetry architecture and cinema as well as looking at contemporary writing by women and at changes in cultural depictions of sexuality Germany s political paroxysms throughout the last hundred years figure prominently in the evolution of its cultural consciousness so there is in these essays a strong sense of nation invented perfected lost and recovered but always fascinating A totally homogenized German culture one devoid of any higher aspirations will be the impoverished result of postmodernism the editors warn It is their goal to remind those who are all too eager to overlook the losses occurring in this process that this tendency can also besides its positive democratic aspect lead to one dimensionality
