*Green Industrial Policy in Emerging Countries* Anna Pegels,2014-03-05 For decades governments have tried to foster industrial competitiveness and economic growth Many instruments are known to work and many lessons have been learned However humanity is increasingly feeling the effects of natural resource depletion The rate of this depletion is deeply unsustainable and it is as of yet inextricably linked to economic growth and development To preserve acceptable living conditions for future generations while at the same time creating these conditions for millions of poor in the first place we must achieve a de linking of economic activity and resource

depletion This book identifies the drivers and success factors of green industrial policy which seeks to reconcile the synergies and trade offs which exist between economic and environmental goals Greening the economy is a goal which will require enormous investment As markets are currently failing to provide the required incentives for environmental sustainability governments must intervene and provide policy rents for investments in sustainability while withdrawing rents from polluting investments In this they will face the risk of political capture by interest groups and difficult choices among technologies Rent management is therefore the heart of green industrial policy and the focus of this book On top of this the country examples provided in this volume focus on the emerging powers which will have an important influence the future of our planet However the lessons learned are valuable not only for countries introducing green industrial policies for the first time but also for those under pressure to reform existing policies This book will be of interest to students researchers and policymakers in the areas of energy policy sustainable development industrial economics and ecological economics

Uyarra, Jacob Carstensen, Marianna Mea, 2017-03-22 Marine management requires approaches which bring together the best research from the natural and social sciences. It requires stakeholders to be well informed by science and to work across administrative and geographical boundaries, a feature especially important in the inter-connected marine environment. Marine management must ensure that the natural structure and functioning of ecosystems is maintained to provide ecosystem services. Once those marine ecosystem services have been created, they deliver societal goods as long as society inputs its skills, time, money, and energy to gather those benefits. However, if societal goods and benefits are to be limitless, society requires appropriate administrative, legal, and management mechanisms to ensure that the use of such benefits does not impact on environmental quality but instead supports its sustainable use.
