

TYPICAL PLUMBING SCHEMATIC

BASIC POOL/SPA PLUMBING:

These schematics show the necessary plumbing required to operate a pool and a spa that share common pumps, filters, and heaters. The Motorized Diverter Valves will change position when spa use is desired.

IMPORTANT:

Be sure the valves are synchronized to move simultaneously from pool suction and pool return to the spa suction and spa return. If they are not synchronized, please follow the instructions below:

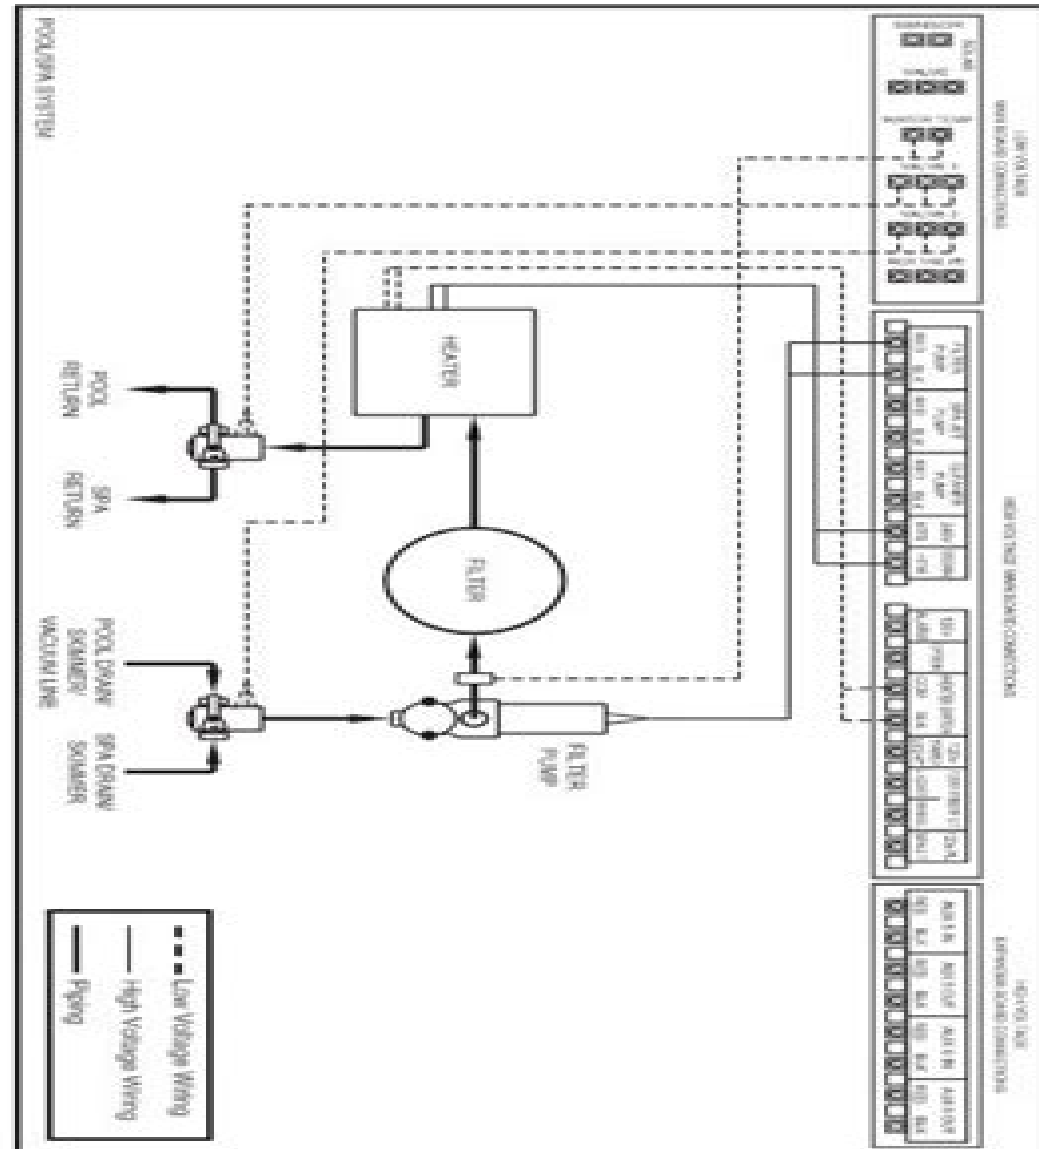

1. Reverse the polarity of the wiring to the valve diverter motor that is out of synchronization. The best way to accomplish this is to reverse the red and white wires inside the valve diverter motor enclosure.
2. Remove the motor enclosure cover, remove the wire nuts, switch the red and white wires, reconnect the wires with wire nuts, and reinstall cover.

NOTE:

The polarity of the wiring to the valve motor that is out of synchronization can also be reversed by changing the position of the toggle switch to the reverse position.

If you select this method to reverse polarity, be sure to change the sticker at the rear of the motor enclosure from the black (Auto-Off-Reverse) sticker to the white (Reverse-Off- Auto) sticker.

You must change the sticker so that users and service personnel know the correct auto position for the valve.
