Figure 1. Construction of Automatic Transmission

The JR405E automatic transmission is electrically controlled by a micro-computer transmission control module (TCM). There are four forward speeds and one reverse speed.

This JR405E automatic transmission employs a clutch pressure direct control system (Direct Electronic Shift Control: DESC) using a duty cycle type solenoid, which ensures high shift quality.

This transmission also controls learning and constantly checks the time of each clutch and brake required for the speed change to match this time with the target value for the optimum speed change.

The TCM will automatically select the most appropriate shift points and lock-up points depending on the throttle opening angle, the vehicle speed and the vehicle load.

If any trouble arises in the vehicle sensor, throttle sensor, solenoid, etc., the fail-safe control function is activated to keep the running performance.

Problems with the sensors, the solenoids can be quickly detected with the self diagnosis procedure described in this manual.

The JR405E automatic transmission consists of the torque converter, the oil pump, the input shaft, the output shaft, the planetary gears and the control valve.

The gear train consists of two planetary gear sets and three multiple plate clutches in combination with two multiple plate brakes and a one-way clutch.
