Snell, 1975 Research has recently been conducted on the use of large buried chemical explosive charges for engineering excavation Investigations in this area were initially concerned with crater formation in relatively homogeneous rock media a process which is now well understood However it has become apparent that the greatest cost and operational advantages may be realized by applying the technique to rock excavation in an underwater environment Cratering dynamics in an underwater two layer configuration have not been well understood

Small scale modeling tests and large scale excavation projects have revealed two new factors which significantly influence underwater cratering processes 1 early time dynamic effects caused by the presence of the rock water interface and water layer and 2 very late time water washback and slope failure effects in the crater vicinity The report addresses the first of these two effects by means of hydrodynamic computer calculations [Franchise Opportunities Handbook](#) ,1991-06

many parts of the world groundwater resources are under increasing threat from growing demands wasteful use and contamination To face the challenge good planning and management practices are needed A key to the management of groundwater is the ability to model the movement of fluids and contaminants in the subsurface The purpose of this book is to construct conceptual and mathematical models that can provide the information required for making decisions associated

with the management of groundwater resources and the remediation of contaminated aquifers The basic approach of this book is to accurately describe the underlying physics of groundwater flow and solute transport in heterogeneous porous media starting at the microscopic level and to rigorously derive their mathematical representation at the macroscopic levels The well posed macroscopic mathematical models are formulated for saturated single phase flow as well as for unsaturated and multiphase flow and for the transport of single and multiple chemical species Numerical models are presented and computer codes are reviewed as tools for solving the models The problem of seawater intrusion into coastal aquifers is examined and modeled The issues of uncertainty in model input data and output are addressed The book concludes with a chapter on the management of groundwater resources Although one of the main objectives of this book is to construct mathematical models the amount of mathematics required is kept minimal Bradshaw's railway almanack, directory, shareholders' guide, and manual George Bradshaw,1885 *Bradshaw's Railway Manual, Shareholders' Guide, and Official Directory for ...* ,1885

Advanced Information Networking and Applications Leonard Barolli,Isaac Woungang,Tomoya Enokido,2021-04-23 This book covers the theory design and applications of computer networks distributed computing and information systems Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing communications intelligence and actuations is emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications Several of such applications have been difficult to realize because of many interconnections problems To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks The aim of the book **Advanced Information Networking and Applications** is to provide latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications
