

Chapter 3.4 - Membrane Structure and Function

How do substances move in and out of cells?

Why?

An advertisement for sports drinks, such as Gatorade, PowerAde, and Vitaminwater, etc. seem to be everywhere. All of these drinks are supposed to help your body recover and replenish lost electrolytes, fluids, and vitamins after exercise. But how do the essential molecules contained in these drinks get into your cells quickly to help you recover after exercise?

Model 1 – Simple Diffusion

1. How many different types of molecules are shown in Model 1? **Two**
2. Count and record the number of triangles and circles found on each side of the membrane.
Triangles — 14 on left, none on right; Triangles — 14 on left, none on right
3. Which shape is larger? **Triangle**
4. Describe the direction of the movement of the molecules in Model 1? **Triangle**
5. Which molecules are able to pass through the semi-permeable membrane? Justify your answer.
The dots, because they are small and can fit through the gaps, and because they are shown as equally distributed on both sides of the membrane

Molecular Biology of Membranes H.R. Petty, 2013-06-29 This text attempts to introduce the molecular biology of cell membranes to students and professionals of diverse backgrounds Although several membrane biology books are available they do not integrate recent knowledge gained using modern molecular tools with more traditional membrane topics Molecular techniques such as cDNA cloning and x ray diffraction have provided fresh insights into cell membrane structure and function The great excitement today which I attempt to convey in this book is that molecular details are beginning to merge with physiological responses In other words we are beginning to understand precisely how membranes work This textbook is appropriate for upper level undergraduate or beginning graduate students Readers should have previous or concurrent coursework in biochemistry prior studies in elementary physiology would be helpful I have found that the presentation of topics in this book is appropriate for students of biology biochemistry biophysics and physiology chemistry and medicine This book will be useful in courses focusing on membranes and as a supplementary text in biochemistry courses Professionals will also find this to be a useful resource book for their personal libraries

Membrane Biophysics Hongda Wang, Guohui Li, 2017-11-21 This book highlights recent advances in and diverse techniques for exploring the plasma membrane's structure and function It starts with two chapters reviewing the history of membrane research and listing recent advances regarding membrane structure such as the semi mosaic model for red blood cell membranes and the protein layer lipid protein island model for nucleated tissue cell membranes It subsequently focuses on the localization and interactions of membrane components dynamic processes of membrane transport and transmembrane signal transduction Classic and cutting edge techniques e.g. high resolution atomic force microscopy and super resolution fluorescence microscopy used in biophysics and chemistry are presented in a very comprehensive manner making them useful and accessible to both researchers in the field and novices studying cell membranes This book provides readers a deeper understanding of the plasma membrane's organization at the single molecule level and opens a new way to reveal the relationship between the membrane's structure and functions making it essential reading for researchers in various fields

Structure and Function of Biological Membranes Lawrence I. Rothfield, 2014-06-28 *Structure and Function of Biological Membranes* explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches The book is an in depth study of the structure and function of membranes It is divided into three main parts The first part provides an overview of the study of the biological membrane at the molecular level Part II focuses on the detailed description of the overall molecular organization of membranes The third part covers the relationship of the molecular organization of membranes to specific membrane functions discusses

Moller,2012-01-11 The plasma membrane forms the living barrier between the cell and its surroundings For this reason it has a wide range of important functions related to the regulation of the composition of the cell interior and to communication with the cell exterior The plasma membrane has therefore attracted a lot of research interest Until the early 1970 s it was only possible to study the plasma membrane in situ

its structure e g by electron microscopy and its function e g by uptake of radioactively labeled com pounds into the intact cell or tissue The first isolation of plant protoplasts by enzymatic digestion of the cell wall in the early 1970 s was an important step forward in that it provided direct access to the outer surface of the plasma membrane More importantly T K Hodges and R J Leonard in 1972 published the description of a method by which a fraction enriched in plasma membranes could be isolated from plant tissues using sucrose gradient centrifugation As a result the 1970 s saw a leap forward in our understanding of the structurc and function of the plasma membrane In 1981 S Widell and C Larsson published the first of a series of papers in which plasma membrane vesicles of high yield and purity were isolated from a wide range of plant tissues using aqueous polymer two phase parti tioning

Biological Membranes Roger Harrison,2013-08-01 to the Second Edition RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of Biological Membranes was published It is to take account of rapid advances in the field that we have written the present edition There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms Much more information has become available concerning the role of the plasma membrane in the cell s recognition of and

response to external signals and this is reflected in the increased coverage of these topics in the book. The general form of the book remains the same. As before, a list of suggested reading, subdivided by chapter, is provided, and this has been expanded to include a greater proportion of original papers. The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for postgraduate workers entering the field of membrane research. We have taken cognizance of the comments of many reviewers, colleagues, and students on the first edition and thank them for their contributions. In particular, we wish to acknowledge our colleagues R. E. Eisinger, G. D. Holman, D. W. Hough, and A. H. Rose. Dr. C. R.

Structure and Dynamics of Membranes R. Lipowsky, E. Sackmann, 1995-06-15. The first volume of the Handbook deals with the amazing world of biomembranes and lipid bilayers. Part A describes all aspects related to the morphology of these membranes, beginning with the complex architecture of biomembranes, continuing with a description of the bizarre morphology of lipid bilayers, and concluding with technological applications of these membranes. The first two chapters deal with biomembranes, providing an introduction to the membranes of eucaryotes and a description of the evolution of membranes. The following chapters are concerned with different aspects of lipids, including the physical properties of model membranes composed of lipid-protein mixtures, lateral phase separation of lipids and proteins, and measurement of lipid-protein bilayer diffusion. Other chapters deal with the flexibility of fluid bilayers, the closure of bilayers into vesicles, which attain a large variety of different shapes, and applications of lipid vesicles and liposomes. Part B covers membrane adhesion, membrane fusion, and the interaction of biomembranes with polymer networks such as the cytoskeleton. The first two chapters of this part discuss the generic interactions of membranes from the conceptual point of view. The following two chapters summarize the experimental work on two different bilayer systems. The next chapter deals with the process of contact formation, focal bonding, and macroscopic contacts between cells. The cytoskeleton within eucaryotic cells consists of a network of relatively stiff filaments, of which three different types of filaments have been identified. As explained in the next chapter, much has been recently learned about the interaction of these filaments with the cell membrane. The final two chapters deal with membrane fusion.

The Role of Membranes in Metabolic Regulation Myron Mehlman, 2012-12-02. The Role of Membranes in Metabolic Regulation is the second volume in a series of in-depth reviews of specific areas of metabolic regulation. This volume is based on the 1972 symposium on The Role of Membranes in Metabolic Regulation held at the University of Nebraska Medical School. Separating 20 manuscripts into chapters, this book emphasizes membrane structure and function as well as utilization of affinity chromatography for purification of biologically important cellular components called membrane receptors. It also discusses the role of phospholipids in hormone-sensitive enzyme systems, with an emphasis on the adenylate cyclase system. Other chapters describe the induction of steroidogenesis by corticotrophin and its synthetic analogues, coupled by an azo linkage, in free adrenal cells, and the interaction between the mammary epithelial cells and insulin-sepharose systems. Topics on erythrocytes as a system for studying the properties of

adenylate cyclase and the ionic effects in the sugar transport regulation in muscle are discussed in the concluding chapters of the book Biochemists physiologists pharmacologists physicians researchers and all others interested in the concepts about metabolic regulation will find this series of great value **A Survey of Molecular Aspects of Membrane Structure and Function** Gheorghe Benga, 1985 Band 1
