**The Right to Erasure in Eu Data Protection Law** Postdoctoral Researcher Jef Ausloos,2020-04-27 The right to erasure or right to be forgotten has become a major flashpoint in the courts and public opinion of the potential and limits of data protection law to empower individuals to control their data This is the first book to focus on the right to erasure in the context of Article 17 of the GDPR its theory history and legal scope

**Disorder and the Disinformation Society** Jonathan Paul Marshall,James Goodman,Didar Zowghi,Francesca da Rimini,2015-04-17 This book is the first general social analysis that seriously considers the daily experience of information disruption and software failure within contemporary Western society Through an investigation of informationalism defined as a contemporary form of capitalism it describes the social processes producing informational disorder While most social theory sees disorder as secondary pathological or uninteresting this book takes disordering processes as central to social life The book engages with theories of information society which privilege information order offering a strong counterpoint centred on disinformation Disorder and the Disinformation Society offers a practical agenda arguing that difficulties in producing software are both inherent to the process of developing software and in the social dynamics of informationalism It outlines the dynamics of software failure as they impinge on of information workers and on daily life explores why computerized finance has become inherently self disruptive asks how digital enclosure and intellectual property create conflicts over cultural creativity and disrupt informational accuracy and scholarship and reveals how social media can extend but also distort the development of social movements

**The Internet Trap** Matthew Hindman,2018-09-25 A book that challenges everything you thought you knew about the online economy The internet was supposed to fragment audiences and make media monopolies impossible Instead behemoths like Google and Facebook now dominate the time we spend online and grab all the profits from the attention economy The Internet Trap explains how this happened This provocative and timely book sheds light on the stunning rise of the digital giants and the online struggles of nearly everyone else and reveals what small players can do to survive in a game that is rigged against them Matthew Hindman shows how seemingly tiny advantages in attracting users can snowball over time The internet has not reduced the cost of reaching audiences it has merely shifted who pays and how Challenging some of the most enduring myths of digital life Hindman explains why the internet is not the postindustrial technology that has been sold to the public how it has become mathematically impossible for grad students in a garage to beat Google and why net neutrality alone is no guarantee of an open internet He also explains why the challenges for local digital news outlets and other small players are worse than they appear and demonstrates what it really takes to grow a digital audience and stay alive in today s online economy The Internet Trap shows why even on the internet there is still no such thing as a free audience

**On the Mathematics of Modelling, Metamodelling, Ontologies and Modelling Languages** Brian Henderson-Sellers,2012-06-13 Computing as a discipline is maturing rapidly However with maturity often comes a plethora

of subdisciplines which as time progresses can become isolationist The subdisciplines of modelling metamodelling ontologies and modelling languages within software engineering e g have to some degree evolved separately and without any underpinning formalisms Introducing set theory as a consistent underlying formalism Brian Henderson Sellers shows how a coherent framework can be developed that clearly links these four previously separate areas of software engineering In particular he shows how the incorporation of a foundational ontology can be beneficial in resolving a number of controversial issues in conceptual modelling especially with regard to the perceived differences between linguistic metamodelling and ontological metamodelling An explicit consideration of domain specific modelling languages is also included in his mathematical analysis of models metamodels ontologies and modelling languages This encompassing and detailed presentation of the state of the art in modelling approaches mainly aims at researchers in academia and industry They will find the principled discussion of the various subdisciplines extremely useful and they may exploit the unifying approach as a starting point for future research

**Interaction in Educational Domains** Kirsi Tirri, Elina Kuusisto, 2013-11-19 In this volume we take a holistic approach to education viewing human beings as lifelong learners who need interaction in all educational domains cognitive affective psychomotor to actualize their full potential The chapters are based on presentations given at the 2012 conference of the Finnish Educational Research Association FERA whose theme was Interaction in Educational Research Prof David Clarke from the University of Melbourne in Australia and the conference s keynote speaker opens our symposium with a discussion of international comparative research in educational interaction by constructing and concealing differences The chapters that follow arranged in three parts deal with interaction in cognitive affective and psychomotor domains In Part I theoretical and philosophical approaches to interaction are examined through ontological epistemological and semiotic perspectives Part II presents a series of empirical studies on educational interaction Together these show regional differences in cognitive and psychomotor learning outcomes the importance of academic emotions in learning cultural aspects in understanding the visual arts and interactive learning for gifted science students Part III introduces three programs that promote educational interaction one enhances teacher education with interdisciplinary integration another explores the benefits of Finnish Russian cooperation and a third uses musical concerts as an interactive tool for special education All of the chapters contribute to the current research and discussion on learning and interaction In this field inquiries need to be carried out in different learning domains and in various cultural contexts In particular cross cultural comparisons are useful in validating the findings of empirical studies and testing the culture dependent and culture invariant dimensions of educational interaction

*The U.S. Invasion of Grenada* Philip Kukielski, 2020-01-03 In the fall of 1983 arguably the coldest year of the decades long Cold War the world s greatest superpower invaded Grenada a Marxist led Caribbean nation the size of Atlanta Why and how this unlikely one week war was waged was shrouded in secrecy at the time and has remained so ever since This book is an overdue reconsideration of Operation Urgent Fury based on historical

evidence that only recently has been revealed in declassified documents oral history interviews and memoir accounts This chronological narrative emphasizes the human dimension of a sudden crisis now regarded as the greatest foreign policy challenge of President Ronald Reagan s first term Because the American intervention was hastily drafted many snafus and accidents marked the chaotic initial days of the operation Inevitably it fell to individual soldiers aviators and sailors to perform heroic acts to make up for faulty intelligence inadequate communication or poor coordination This work recounts their inspiring underreported stories in filling out a more complete portrait of Operation Urgent Fury The final chapter recounts the invasion s aftereffects especially the unexpected role it played in Congressional reform of the military for future combat in the Middle East

**The Emergence of Geophysics: A Journey into the Twentieth Century** R.J. Howarth, 2024-12-02 How did geophysics begin Who were the pioneers of this new science What instruments did they devise to measure the Earth related phenomena they were interested in This Memoir attempts to answer such questions in a well illustrated and largely non technical account The seventeenth century saw magnetism used as an aid to prospecting for iron ore in Sweden and Isaac Newton's derivation of the law of gravitational attraction A gradually increasing interest in physics of the Earth brought forth the new discipline of geophysics in the early nineteenth century and by the end of the following century airborne and satellite based investigations had become routine The *Emergence of Geophysics* explores this evolution in several parallel strands terrestrial magnetism and electricity gravity seismicity heat geodynamics and radioactivity broadly reflecting the timing of their introduction as tools aiding geophysical studies Biographical information is included for many of its practitioners and the book should be of interest to both geophysicists and to anyone interested in the history of Earth science

**Rockefeller and the Internationalization of Mathematics Between the Two World Wars** Reinhard Siegmund-Schultze, 2012-12-06 Philanthropies funded by the Rockefeller family have been prominent in the social history of the twentieth century for their involvement in medicine and applied science This book provides the first detailed study of their relatively brief but nonetheless influential foray into the field of mathematics The careers of a generation of pathbreakers in modern mathematics such as S Banach B L van der Waerden and Andr Weil were decisively affected by their

becoming fellows of the Rockefeller funded International Education Board in the 1920s To help promote cooperation between physics and mathematics Rockefeller funds supported the erection of the new Mathematical Institute in G ttingen between 1926 and 1929 while the rise of probability and mathematical statistics owes much to the creation of the Institut Henri Poincar in Paris by American philanthropy at about the same time This account draws upon the documented evaluation processes behind these personal and institutional involvements of philanthropies It not only sheds light on important events in the history of mathematics and physics of the 20th century but also analyzes the comparative developments of mathematics in Europe and the United States Several of the documents are given in their entirety as significant witnesses to the gradual shift of the centre of world mathematics to the USA This shift was strengthened by the Nazi purge of German and European mathematics after 1933 to which the Rockefeller Foundation reacted with emergency programs that subsequently contributed to the American war effort The general historical and political background of the events discussed in this book is the mixture of competition and cooperation between the various European countries and the USA after World War I and the consequences of the Nazi dictatorship after 1933 Ideological positions of both the philanthropists and mathematicians mattered heavily in that process Cultural bias in the selection of fellowsand of disciplines supported and the economic predominance of American philanthropy led among other things to a restriction of the programs to Europe and America to an uneven consideration of European candidates and to preferences for Americans Political self isolation of the Soviet Union contributed to an increasing alienation of that important mathematical culture from Western mathematics By focussing on a number of national cultures the investigation aims to represent a step toward a true inter cultural comparison in mathematics

**Why Dempster's fusion rule is not a generalization of Bayes fusion rule** Jean Dezert, Albena Tchamova, Deqiang Han, Jean-Marc Tacnet, 2012-10-01 In this paper we analyze Bayes fusion rule in details from a fusion standpoint as well as the emblematic Dempster s rule of combination introduced by Shafer in his Mathematical Theory of evidence based on belief functions We propose a new interesting formulation of Bayes rule and point out some of its properties A deep analysis of the compatibility of Dempster s fusion rule with Bayes fusion rule is done We show that

Dempster's rule is compatible with Bayes fusion rule only in the very particular case where the basic belief assignments (bbas) to combine are Bayesian and when the prior information is modeled either by a uniform probability measure or by a vacuous bba. We show clearly that Dempster's rule becomes incompatible with Bayes rule in the more general case where the prior is truly informative, not uniform nor vacuous. Consequently, this paper proves that Dempster's rule is not a generalization of Bayes fusion rule.
