	Criterion A: Introduction	Criterion B: Information/Measurement	Criterion C: Mathematical processes	Criterion D: Interpretation of results	Criterion E: Validity	Criterion F: Structure and communication
0	The student does not produce a clear statement of the task.	The student does not collect relevant information or generate relevant measurements.	The student does not attempt to carry out any mathematical processes.	The student does not produce any interpretations or conclusions.	The student does not comment on the mathematical processes used or the interpretations/conclusions made.	The student has made no attempt to structure the project.
1	The student produces a clear statement of the task.	The student collects relevant information or generates relevant measurements.	The student carries out simple mathematical processes.	The student produces at least one interpretation or conclusion.	The student has made an attempt to comment on either the mathematical processes used or the interpretations/conclusions made.	The student has made some attempt to structure the project or has used appropriate notation and terminology.
2	The student produces a title, a clear statement of the task and a clear description of the plan.	The relevant information collected, or set of measurements generated by the student, is organized in a form appropriate for analysis or is sufficient in both quality and quantity.	The simple mathematical processes are mostly or completely correct, or the student makes an attempt to use at least one sophisticated process.	The student produces at least one interpretation and/or conclusion that is consistent with the mathematical processes used.	The student has made a serious attempt to comment on both the mathematical processes used and the interpretations/conclusions made.	The student has made some attempt to structure the project and has used appropriate notation and terminology.
3		The relevant information collected, or set of measurements generated by the student, is organized in a form appropriate for analysis and is sufficient in both quality and quantity.	The student carries out at least one sophisticated process, and all the processes used are mostly or completely accurate.	The student produces a comprehensive discussion of interpretations and conclusions that are consistent with the mathematical processes used.		The student has produced a project that is well structured and communicated in a coherent manner.
4			The student carries out at least one sophisticated process; the processes used are mostly or completely accurate and all the processes used are relevant.			
5			The student accurately carries out a number of relevant sophisticated processes.

Age of Discovery Ian Goldin, Chris Kutarna, 2024-03-26

A study of how to address our contemporary renaissance by examining similarities with the original Renaissance. The present is a contest between the bright and dark sides of discovery. To avoid being torn apart by its stresses, we need to recognize the fact and gain courage and wisdom from the past. Age of Discovery shows how. Now is the best moment in history to be alive, but we have never felt more anxious or divided. Human health, aggregate wealth and education are flourishing. Scientific discovery is racing forward. But the same global flows of trade, capital, people and ideas that make gains possible for some people deliver big losses to others and make us all more vulnerable to one another. Business and science are working giant revolutions upon our societies, but our politics and institutions evolve at a much slower pace. That's why, in a moment when everyone ought to be celebrating giant global gains, many of us are righteously angry at being left out and stressed about where we're headed. To make sense of present shocks, we need to step back and recognize we've been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, likewise redrew all maps of the world, democratized communication and sparked a flourishing of creative achievement. But their world also grappled with the same dark side of rapid change, social division, political extremism, insecurity, pandemics and other unintended consequences of discovery. Now is the second Renaissance. We can still flourish if we learn from the first. Praise for Age of Discovery: A bold, mega-analysis of global education, health, prosperity and technology, incisive and rich in context and granularity. Nature Essential reading to navigate the waves of innovation we face today. Garry Kasparov, 13th World Chess Champion and Chairman of the Human Rights Foundation.

Handbook of Research on K-12 Blended and Virtual Learning Through the i²Flex Classroom Model Avgerinou, Maria D., Pelonis, Peggy, 2021-03-05

Teaching models that focus on blended and virtual learning have become important during the past year and have become integral for the continuance of learning. The i²Flex classroom model, a variation of blended learning, allows non-interactive teaching activities to take place without teachers' direct involvement, freeing up time for more meaningful teacher-student and student-student interactions. There is evidence that i²Flex leads to increased student engagement and motivation as well as better exploitation of teachers and classroom time, leading to the development of higher-order cognitive skills as well as study skills for students' future needs related to citizenship, college and careers. The Handbook of Research on K-12 Blended and Virtual Learning Through the i²Flex Classroom Model focuses not only on how to design, deliver and evaluate courses but also on how to assess teacher performance in a blended i²Flex way at the K-12 level. The book will discuss the implementation of the i²Flex iSquareFlex, a non-traditional learning methodology which integrates internet-based delivery of content and instruction with faculty-guided

student independent learning in combination with face to face classroom instruction aiming at developing higher order cognitive skills within a flexible learning design framework While highlighting new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers this publication is an essential reference source for pre service and in service teachers researchers administrators educational technology developers and students interested in how the i2Flex model was implemented in classrooms and the effects of this learning model *Paper Trails* Cameron Blevins,2021 Between the 1860s and the early 1900s the western United States underwent one of the most dramatic reorganizations of people land capital and resources in American history *Paper Trails* tells a new history of the nation s western expansion by shining a light on the era s largest government institution the US Post **Good Practices**
