Integration of AI and OR Techniques in Constraint Programming for Combinatorial Optimization Problems Tobias Achterberg,J. Christopher Beck,2011-05-13 This book constitutes the refereed proceedings of the 8th International Conference on Integration of AI and OR Techniques in Constraint Programming for Combinatorial Optimization Problems CPAIOR 2011 held in Berlin Germany in May 2011 The 13 revised full papers and 7 revised short papers presented together with 3 invited lectures were carefully reviewed and selected from 35 submissions The papers are focused on both theoretical and practical application oriented issues and present current research with a special focus on the integration and hybridization of the approaches of constraint programming artificial intelligence and operations research technologies for solving large scale and complex real life combinatorial optimization problems **Computerized Multistage Testing** Duanli Yan,Alina A. von Davier,Charles Lewis,2016-04-19 Unlike other forms of adaptive testing multistage testing MST is highly suitable for testing educational achievement because it can be adapted to educational surveys and student testing This volume provides the first unified source of information on the design psychometrics implementation and operational use of MST It shows how to apply theoretical statistical tools to testing in novel and useful ways It also explains how to explicitly tie the assumptions made by each model to observable or at least inferable data conditions *23 European Symposium on Computer Aided Process Engineering* João A. Fabro,Sérgio L. Stebel,L.V.R. Arruda,Flávio Neves,Ana Paula F.D. Barbosa-Póvoa,Susana Relvas,2013-06-10 This paper presents a novel approach to aid the operational decision making of scheduling activities in a real world pipeline used to transport heavy oil derivatives Heavy oil derivatives are products of less aggregate value such as fuel oils e g Marine Fuel These products present some special characteristics for their transport Indeed due to their viscosity at the room temperature it is impossible to transport them without heating Thus when transporting such products through pipelines the entire pipeline network and the storage tanks must be maintained heated

during the entire pumping process Such characteristics imply that a specific model oriented to this type of problem must be developed Some papers have already addressed scheduling decisions within pipeline networks but the considered scenario is particularly complex In a heavy oil derivatives pipeline system it s common to use the same tank for different products during the scheduling horizon thus changing the aggregate capacity of storage for some products This procedure is known as the exchange of service of the tank In order to perform the programmed movements it s frequent the relocation of a tank from one product to another decreasing the storage capacity of the former while increasing the later In addition a lot of constraints are modelled as instance product blending in line tankage constraints volume of pipes production consumption constraints and a series of operational requirements The approach proposed in this work is formed by a decomposition procedure that uses a sequence of mathematic models and heuristicsto solve the problem The proposed approach is tested using a real world scenario composed of a pipeline tree system The model has been extensively tested in typical operational scenarios Such models have been solved to optimality in few CPU seconds using a commercial package **Decision Optimization with IBM ILOG CPLEX Optimization Studio** Stefan Nickel,Claudius Steinhardt,Hans Schlenker,Wolfgang Burkart,2022-08-01 This textbook offers a comprehensive up to date introduction to the Optimization Programming Language OPL Embedded in the IBM ILOG CPLEX Optimization Studio with its solver engine CPLEX OPL has been popular for years not only for academic and scientific purposes but also among practitioners who need to model and solve large scale real world business optimization problems The book covers the recent features of the software and includes ten consecutive tutorials each with additional exercises as well as several comprehensive application studies The book is specifically designed for advanced undergraduate and graduate courses in e g management science operations research computer science mathematics mathematical economics and industrial engineering It can also serve as self study material for practitioners whose work involves the modeling and optimization of planning and decision problems and who need a sound introduction to the software Solutions to the exercises as well as the source codes from the textbook are available for download weblink included **Modeling Languages in Mathematical Optimization** Josef Kallrath,2013-12-01 This volume presents a unique combination of modeling and solving real world optimization problems It is the only book which treats systematically the major modeling languages and systems used to solve mathematical optimization problems and it also provides a useful overview and orientation of today s modeling languages in mathematical optimization It demonstrates the strengths and characteristic features of such languages and provides a bridge for researchers practitioners and students into a new world solving real optimization problems with the most advances modeling systems **Digitizing Production Systems** Numan M.
