IMM and IMM2 Support on IBM System x and BladeCenter Servers

This document lists which IBM® System x® and BladeCenter® servers support the Integrated Management Module (IMM) and Integrated Management Module II (IMM2) service processors. The IMM and IMM2 consolidate service processor functionality previously provided by the combination of the Baseboard Management Controller (BMC) and the Remote Supervisor Adapter II in IBM System x and BladeCenter products.

System x servers

System x servers include either the Integrated Management Module II (newer systems) or the Integrated Management Module (older systems).

Integrated Management Module II support

Integrated Management Module II (IMM2) is the second-generation management module integrated on System x servers. IMM2 will offer three levels of functionality: Basic, Standard, and Premium. Starting with IMM2, the Virtual Media Key will no longer be used. Upgrading to Standard or Advanced will be performed using a software license key using a procedure named IBM Feature on Demand (FoD).

IMM2 Basic has the following features:

- Industry-standard interfaces and protocols
- Intelligent Platform Management Interface (IPMI) Version 2.0
- Common Information Model (CIM)
- Advanced Predictive Failure Analysis (PFA) support
- Continuous health monitoring
- Choice of a dedicated or shared Ethernet connection
- Domain Name System (DNS) server support
- Dynamic Host Configuration Protocol (DHCP) support
- Embedded Dynamic System Analysis (DSA)
- LAN over USB for in-band communications to the IMM
- Serial over LAN
- Server console serial redirection

Note: IMM2 Basic does not include web browser or remote presence capabilities.

IMM2 Standard (as standard in some servers or as enabled using the Feature on Demand software license key in other servers) has the following features:

- Secure web server user interface
- Remote firmware updating
- Remote power control
- Access to server vital product data (VPD)
- Advanced Predictive Failure Analysis (PFA) support
