Data Architecture: A Primer for the Data Scientist W.H. Inmon, Daniel Linstedt, 2014-11-26 Today the world is trying to create and educate data scientists because of the phenomenon of Big Data And everyone is looking deeply into this technology But no one is looking at the larger architectural picture of how Big Data needs to fit within the existing systems data warehousing systems Taking a look at the larger picture into which Big Data fits gives the data scientist the necessary context for how pieces of the puzzle should fit together Most references on Big Data look at only one tiny part of a much larger whole Until data gathered can be put into an existing framework or architecture it can t be used to its full potential Data Architecture a Primer for the Data Scientist addresses the larger architectural picture of how Big Data fits with the existing information infrastructure an essential topic for the data scientist Drawing upon years of practical experience and using numerous examples and an easy to understand framework W H Inmon and Daniel Linstedt define the importance of data architecture and how it can be used effectively to harness big data within existing systems You ll be able to Turn textual information into a form that can be analyzed by standard tools Make the connection between analytics and Big Data Understand how Big Data fits within an existing systems environment Conduct analytics on repetitive

and non repetitive data Discusses the value in Big Data that is often overlooked non repetitive data and why there is significant business value in using it Shows how to turn textual information into a form that can be analyzed by standard tools Explains how Big Data fits within an existing systems environment Presents new opportunities that are afforded by the advent of Big Data Demystifies the murky waters of repetitive and non repetitive data in Big Data **Planning and Design of Information Systems** André Blokdijs,2014-06-28 Planning and Design of Information Systems provides a theoretical base and a practical method of executing the planning of computerized information systems and the planning and design of individual applications The book is organized into five parts covering the non technical and nonimplementational part of information systems planning design and development Part I gives the theoretical base for the subsequent parts of the book It discusses modeling techniques notations boundaries quality issues and aspects and decomposition techniques and problems Part II discusses the needs problems and possible solutions for user participation It describes user organizations in respect of culture maturity in the use of automation and computers and gives a synthesis of participation cultures maturity and information systems development techniques Part III describes how to develop an Information Systems Architecture an Information Systems Plan and a Data Architecture Part IV presents a structured programmed approach to planning an application in a short period while maintaining high quality and discusses project management of application development Part V covers information analysis data specification and conceptual data base design and process and dialog design

Computer Network Architectures and Protocols Carl A. Sunshine,2013-06-29 This is a book about the bricks and mortar from which are built those edifices that will permeate the emerging information society of the future computer networks For many years such computer networks have played an indirect role in our daily lives as the hidden servants of banks airlines and stores Now they are becoming more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks function is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area soon finds that solving the traditional problems of transmission modulation noise immunity and error bounds in getting the signal from one point to another is just the beginning of the challenge The communication must be in the right form to be routed properly to be handled without congestion and to be understood at various points in the network As for the computer scientist he finds that his discipline has also changed The fraction of computers that belong to networks is increasing all the time And for a typical single computer the fraction of its execution load storage occupancy and system management problems that are involved with being part of a network is also growing
