Kaplan,2017-12-01 This collection

brings together a set of new papers that advance the debate concerning the nature of explanation in mind and brain science and help to clarify the prospects for bonafide integration across these fields Long a topic of debate among philosophers and scientists alike there is growing appreciation that understanding the complex relationship between the psychological sciences and the neurosciences especially how their respective explanatory frameworks interrelate is of fundamental importance for achieving progress across these scientific domains Traditional philosophical discussions tend to construe the relationship between them in stark terms either they are related in terms of complete independence i e autonomy or complete dependence i e reduction leaving little room for more interesting relations such as that of mutually beneficial interaction or integration A unifying thread across the diverse set of contributions to this volume is the rejection of the assumption that no stable middle ground exists between these two extremes and common embrace of the idea that these sciences are partially dependent on or constrained by one another By addressing whether the explanatory patterns employed across these domains are similar or different in kind and to what extent they inform and constrain each another this volume helps to deepen our understanding of the prospects for successfully integrating mind and brain science Science-Based

Lawmaking Dionysia-Theodora Avgerinopoulou,2019-08-31 The Book takes the approach of a critique of the prevailing international environmental law making processes and their systemic shortcomings It aims to partly redesign the current international environmental law making system in order to promote further legislation and more effectively protect the natural environment and public health Through case studies and doctrinal analyses an array of initial questions guides the reader through a variety of factors influencing the development of International Environmental Law After a historical analysis commencing from the Platonic philosophy up to present the Book holds that some of the most decisive factors that could create an optimized law making framework include among others progressive voting processes science based secondary international environmental legislation new procedural rules that enhance the participation in the law making

process by both experts and the public and also review the implementation compliance and validity of the science base of the laws The international community should develop new law making procedures that include expert opinion Current scientific uncertainties can be resolved either by policy choices or by referring to the so called sound science In formulating a new framework for environmental lawmaking processes it is essential to re shape the rules of procedure so that experts have greater participation in those in order to improve the quality of International Environmental Law faster than the traditional processes that mainly embrace political priorities generated by the States Science serves as one of the main tools that will create the next generation of International Environmental Law and help the world transition to a smart inclusive sustainable future

**Jewish Socratic Questions in an Age without Plato** Yehuda Halper,2021-11-01 Winner of the 2022 Goldstein Goren Book Award from the Goldstein Goren International Center for Jewish Thought at Ben Gurion University of the Negev Yehuda Halper examines Jewish depictions of Socrates and Socratic questioning of the divine among European and North African Jews of the 12th 15th centuries Without direct access to Plato their understanding of Socrates is indirect based on legendary material on fragmentary quotations from Plato or on Aristotle Out of these sources Jewish authors of this period formed two distinct views of Socrates one as a wise ascetic monotheist and the other as a vocal skeptic The latter view has its roots in Plato s Apology where Socrates describes his divine mandate to question all knowledge including knowledge of the divine After exploring how this and similar questions arise in the works of Judah Halevi and the Hebrew Averroes Halper traces how such open questioning of the divine arises in the works of Maimonides Jacob Anatoli Gersonides and Abraham Bibago

Plato's Charmides and the Socratic Ideal of Rationality Walter T. Schmid,1998-01-01 In this book W Thomas Schmid demonstrates that the Charmides a platonic dialogue seldom referenced in contemporary studies is a microcosm of Socratic philosophy He explores the treatment of the Socratic dialectic the relation between it and the Socratic notion of self knowledge the Socratic ideal of rationality and self restraint the norm of holistic and moral health the interpretation of the soul as the rational self the Socratic attitude toward democracy and the connections between dialectic autonomy and moral community Schmid argues that the depiction and account of sophrosune human moderation in the Charmides adumbrates Plato s vision of the life of critical reason and of its uneasy relation to political life in the ancient city

**Science and Technology** Dimitris N. Chorafas,2014-09-12 The aim of this book is to explore science and technology from the viewpoint of creating new knowledge as opposed to the reinterpretation of existing knowledge in ever greater but uncertain detail Scientists and technologists

make progress by distinguishing between what they regard as meaningful and what they consider as secondary or unimportant. The meaningful is dynamic typically the less important is static. Science and technology have made a major contribution to the culture and to the standard of living of our society. From antiquity to the present day the most distinguished scientists and technologists have been thinkers, experimenters and persons willing and able to challenge the obvious. Technology develops products and processes based on the breakthroughs of science. If technologists fail to steadily upgrade their skills, tools and methods they will only be as good as their last design, risking obsolescence. Using practical examples and case studies, this book documents the correlations existing between science and technology and elucidates these correlations with practical applications ranging from real life situations from R D to energy production. As it is a salient problem and a most challenging one to our society, power production has been chosen as a major case study. The holistic approach to science and technology followed by this text enhances the ability to deliver practical results. This book is intended for students and researchers of science, technology and mathematical analysis while also providing a valuable reference book for professionals. Its subject is one of the most debated problems of mankind.

*Plato's Moral Realism* Lloyd P. Gerson, 2023-08-24. Plato's moral realism rests on the Idea of the Good, the unhypothetical first principle of all. It is this, as Plato says, that makes just things useful and beneficial. That Plato makes the first principle of all the Idea of the Good sets his approach apart from that of virtually every other philosopher. This fact has been occluded by later Christian Platonists who tried to identify the Good with the God of scripture. But for Plato, theology though important is subordinate to metaphysics. For this reason, ethics is independent of theology and attached to metaphysics. This book challenges many contemporary accounts of Plato's ethics that start with the so-called Socratic paradoxes and attempt to construct a psychology of action or moral psychology that makes these paradoxes defensible. Rather, Lloyd Gerson argues that Plato at least never thought that moral realism was defensible outside of a metaphysical framework.

**Thinking** Nima Rezaei, Amene Saghazadeh, 2022-09-05. The THINKING: Bioengineering of Science and Art is to discuss about philosophical aspects of thinking at the context of Science and Art. External representations provide evidence that the fundamental process of thinking exists in both animal subjects and humans. However, the diversity and complexity of thinking in humans is astonishing because humans have been permitted to integrate scientific accounts into their accounts and create excellent illustrations for the effects of this integration. The book necessarily begins with the origins of human thinking and human thinking into self and others, body and life. Multiple factors tend to modify the pattern of thinking. They all will come into play by this book that brings thinking into different disciplines: humanities, natural sciences, social sciences, formal sciences and applied sciences. The thinking demands full processing of information and therefore the book considers the economy of thinking as well. The book thoroughly intends to explore thinking beyond the boundaries. Specifically, several chapters are devoted to discipline this exploration either by artistic thinking alone or by art and mathematics aided engineering of

complexities In this manner the book models variations on thinking at the individual and systems levels and accumulates a list of solutions each good for specific scenarios and maximal outcomes     **Science and the Study of God** Alan G.

Padgett,2003 For many today religion and science are seen as enemies battling for human hearts and minds In this new book Alan Padgett shows that they can and should work together in developing a worldview that is at once spiritually meaningful and scientifically sound Pursuing a perspective that he calls the mutuality model Padgett highlights the contributions that both religion and science make to a full understanding of the world and our place in it He argues convincingly that the natural sciences and theology can rationally influence each other without giving up their important distinctives and methods The book explores the nature of informal reason and worldviews the character of theology as a spiritual and academic discipline and the question of what counts as natural science Along the way Padgett discusses such topics as thermodynamics time resurrection and the historical Jesus as examples of the powerful model that he is developing
