Least Common Multiples 6th Tasks:

Real-Time Applications with Stochastic Task Execution Times Sorin Manolache, Petru Eles, Zebo Peng, 2007-03-20
Real Time Applications with Stochastic Task Execution Times presents three approaches to the analysis of the deadline miss ratio of applications with stochastic task execution times Each of the three approaches fits best to a different context The first approach is an exact one and is efficiently applicable to monoprocessor systems The second approach is an approximate one which allows for designer controlled trade off between analysis accuracy and analysis speed It is efficiently applicable to multiprocessor systems The third approach is less accurate but sufficiently fast in order to be placed inside optimisation loops Based on the last approach we propose a heuristic for task mapping and priority assignment for deadline miss ratio minimisation

Promoting Equity in Approximations of Practice for Mathematics Teachers Wilkerson Lee, Carrie, Bondurant, Liza, Sapkota, Bima, Howell, Heather, 2024-11-07 Within the field of mathematics teacher education a profound challenge echoes the persistent gap between theoretical understanding and practical application This lingering divide raises a critical concern one that finds its focus in the exploration of transformative tools known as approximations of practice These tools aim to provide a realistic and contextualized environment for PSTs to cultivate their teaching skills However the broader often overlooked issue permeating this educational terrain is the question of equity in mathematics instruction an issue that this book endeavors to unravel and reshape positioning equity at the forefront of pedagogical considerations Promoting Equity in Approximations of Practice for Mathematics Teachers a compelling work that not only delves into the transformative role of approximations but also champions equity as a cornerstone in reshaping the landscape of mathematics education This groundbreaking work has a dual objective firstly to furnish mathematics teacher educators and researchers with a comprehensive overview of the current landscape of approximations in mathematics education It moves beyond a mere survey encouraging readers to critically analyze frameworks and design choices that either foreground or dismiss equity in these pedagogical spaces Divided into three sections the book delves into the spectrum of work characterizing approximations in mathematics teacher education The first section surveys diverse approaches acknowledging the current lack of focus on equity The second section critically examines the intersection of equity and approximations fostering collaborations between experts in mathematics education and equity focused researchers The third section takes a forward looking stance envisioning the future of equity focused approximations in mathematics education
