

# Membrane Function

How does the cell membrane control movement of materials?

## Why?

The membrane is critical to the maintenance of homeostasis in living organisms. The cell membrane separates the cell from the external environment and plays a critical role in regulating movement of material in and out of the cell. Additionally, eukaryotic cells are made complex by the presence of internal membranes that form organelles, so the cells may become specialized. These organelle membranes create compartments within the cell that can do specific functions.

## Model 1 – Types of Ions and Molecules in a Cell

Type 1 Ions	Type 2 Molecules	Type 3 Molecules	Type 4 Molecules
Potassium: $K^+$	<p>Glucose:</p> 	<p>Water:</p>  <p>Urea:</p> 	Molecular oxygen ( $O_2$ ): $O=O$
Sodium: $Na^+$			Carbon dioxide ( $CO_2$ ): $O=C=O$
Calcium: $Ca^{2+}$			
Chloride: $Cl^-$			
Polar	polar	Polar	nonpolar
small	large	small	small

1. Consider the ions and molecules in Model 1.
  - a. Identify at least two substances that would need to move into a cell to maintain homeostasis.

The two substances that would need to move into a cell to maintain homeostasis are.. Oxygen, water, sugar, and ions.

- b. Briefly explain why the cell needs each of the substances you identified in part a.

Oxygen, water, and glucose are necessary for cellular respiration; and ions for energy.

2. Consider the ions and molecules in Model 1.
  - a. Identify at least two substances that would need to move out of a cell to maintain homeostasis.

Carbon dioxide, water, ions, and urea would need to come out of the cell.

- b. Briefly explain the source of the molecules you identified in part a.

Water and carbon dioxide are a byproduct of cellular respiration

3. Complete the table by labeling the types of substances as polar or nonpolar and large or small.

Probes and Membrane Function Britton Chance, Chuan-pu Lee, J. Kent Blasie, 2013-10-02 Probes of Structure and Function of Macromolecules and Membranes Volume I Probes and Membrane Function discusses the developments in techniques for the measurement of rapid reactions and detection of enzymatic reactions in simple and complex systems This book describes the application of the incisive techniques employed for the study of activity related structural changes in enzymes to functionally related structural changes in membranes The structural changes initiated in response to energy coupling and ion movements in mitochondria and axons are also elaborated This publication covers the basic mechanisms by which structural changes can participate in energy coupling at the redox level of the hemoproteins that leads to the evaluation of the function of ubiquinone and cytochrome b in energy coupling The function of factors that couple electron transport and energy conservation is likewise considered This volume is a good reference for students and researchers conducting work on the structure and function of macromolecules and membranes

**Control of Membrane Function: short-term and long-term** J.M. Ritchie, P. Magistretti, L. Bolis, 2012-12-02 A critical factor in cell to cell interactions is the presence in the cell membrane of highly specific ion channels controlled by specific receptors that are bound to and activated by a gamut of external hormones and neurotransmitters Through both this action on ion channels and action on other membrane components such as G proteins extracellular signals alter intracellular events usually through the mediation of second messengers and so provide the basis for the transduction mechanism connecting extracellular signals with intracellular effectors This volume deals with the various ways that such membrane function is controlled
