

Model 2 – The Selectively Permeable Cell Membrane

7. What two major types of biological molecules compose the majority of the cell membrane in Model 2?
Phospholipids and proteins.
8. How many different protein molecules are found in Model 2?
Four—two types of surface proteins and two types of membrane-spanning proteins.
9. What is the difference between the position of the surface proteins and the membrane-spanning proteins?
Surface proteins do not reach across the membrane, while membrane-spanning proteins do.
10. When a carbohydrate chain is attached to a protein, what is the structure called?
Glycoprotein.
11. When a carbohydrate is attached to a phospholipid, what is the structure called?
Glycolipid.
12. What types of molecules are shown moving across the membrane?
Small polar and nonpolar molecules.
13. Where exactly in the membrane do these molecules pass through?
Between the phospholipids.
14. How does the concentration of the small molecules inside the cell compare to that outside the cell?
More small molecules are outside the cell compared to inside, so the concentration is higher outside compared to inside.

Concepts of Membrane Structure Ronald Aloia, 2012-12-02. Membrane Fluidity in Biology Volume 1. Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid compositions and other organizational parameters that are encompassed by the term fluidity. This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions. This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes. This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion. The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed. This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope. Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles. Finally, the concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties.
