Not Just for the Boys Athene Donald,2023-04-11 Why are girls discouraged from doing science Why do so many promising women leave science in early and mid career Why do women not prosper in the scientific workforce Not Just For the Boys looks back at how society has historically excluded women from the scientific sphere and discourse what progress has been made and how more is still needed Athene Donald herself a distinguished physicist explores societal expectations during both childhood and working life using evidence of the systemic disadvantages women operate under from the developing science of how our brains are and more importantly aren't gendered to social science evidence around attitudes towards girls and women doing science It also discusses how science is done in practice in order to dispel common myths for example the perception that science is not creative or that it is carried out by a lone genius in an ivory tower myths that can be very off putting to many sections of the population A better appreciation of the collaborative creative and multi disciplinary nature of science is likely to lead to its appeal to a far wider swathe of people especially women This book examines the modern way of working in scientific research and how gender bias operates in various ways within it drawing on the voices of leading women in science describing their feelings and experiences It argues the moral and business case for greater diversity in modern research the better to improve science and tackle the great challenges we face today

How Einstein Found His Field Equations Michel Janssen, Jürgen Renn, 2022-07-29 Einstein's field equations of gravitation are a core element of his general theory of relativity. In four short communications to the Prussian Academy of Sciences in Berlin in November 1915 we can follow the final steps toward these equations and the resulting theory's spectacular success in accounting for the anomalous motion of Mercury's perihelion. This source book provides an expert guide to these four groundbreaking papers. Following an introductory essay placing these papers in the context of the development of Einstein's theory, it presents and analyzes in addition to the four papers of November 1915 a careful selection of critical excerpts from papers, letters, and manuscripts documenting the path that early on led Einstein to the field equations of the first November 1915 paper but then took a turn away from them only to lead back to them in the end. Drawing on extensive research at the Einstein Papers Project and the Max Planck Institute for History of Science, this volume traces the intricate interplay between considerations of physics and considerations of mathematics that guided Einstein along this path. It thus presents a concise yet authoritative account of how Einstein found his field equations, affording readers who are prepared to immerse themselves in these intricacies a unique glimpse of Einstein at work at the height of his creative prowess. Highlights of this journey in Einstein's footsteps include the crucial pages with detailed annotation from the Zurich Notebook, the record of Einstein's early search for field equation with his mathematician friend Marcel Grossmann, and the Einstein-Besso manuscript documenting Einstein's attempts with his friend and confidant Michele Besso to explain the Mercury anomaly on the basis of the equations that he and Grossmann had eventually settled on in the Zurich Notebook. *Quantum Legacies* David Kaiser, 2022-06-16 Physicists have grappled with quantum theory for over a century. They have learned to wring precise answers from the theory's governing equations, and no experiment to date has found compelling evidence to contradict it. Even so, the conceptual apparatus remains stubbornly, famously bizarre. Physicists have tackled these conceptual uncertainties while navigating still larger ones: the rise of fascism, cataclysmic world wars, and a new nuclear age; an unsteady Cold War stand-off and its unexpected end. *Quantum Legacies* introduces readers to physics' still-unfolding quest by treating iconic moments of discovery and debate among well-known figures like Albert Einstein, Erwin Schrödinger, and Stephen Hawking, and many others whose contributions have indelibly shaped our understanding of nature. **New Destinations of Empire** Emily Mitchell-Eaton, 2024-11-01 In 1986 the Compact of Free Association marked the formal end of U.S. colonialism in the Republic of the Marshall Islands while simultaneously re-entrenching imperial power dynamics between the two countries. The U.S.-RMI Compact at once enshrined exclusive U.S. military access to the islands and established the right of visa-free migration to the United States for Marshallese citizens, leading to a Marshallese diaspora whose largest population resettled in the seemingly unlikely destination of Springdale, Arkansas. An all-white town by design for much of the twentieth century, Springdale, having nearly quadrupled in population since 1980, has been remade by Marshallese as well as Latinx

immigration Through ethnographic policy based and archival research in Gu han Saipan Hawai i Arkansas and Washington D C New Destinations of Empire tells the story of these place based transformations revealing how U S empire both causes and constrains mobility for its subjects shaping migrants experiences of racialization citizenship and belonging in new destinations of empire In examining two spatial processes imperialism and migration together Emily Mitchell Eaton reveals connections and flows between presumably distant remote sites like Arkansas and the Marshall Islands showing them to be central to the United States most urgent political issues immigration racial justice militarization and decolonization

The Telescope in the Ice Mark Bowen, 2017-11-14 IceCube Observatory a South Pole instrument making the first actual observations of high energy neutrinos has been called the weirdest of the seven wonders of modern astronomy by Scientific American In The Telescope in the Ice Mark Bowen tells the amazing story of the people who built the instrument and the science involved Located near the U S Amundsen Scott Research Station at the geographic South Pole IceCube is unlike most telescopes in that it is not designed to detect light It employs a cubic kilometer of diamond clear ice more than a mile beneath the surface to detect an elementary particle known as the neutrino In 2010 it detected the first extraterrestrial high energy neutrinos and thus gave birth to a new field of astronomy IceCube is also the largest particle physics detector ever built Its scientific goals span not only astrophysics and cosmology but also pure particle physics And since the neutrino is one of the strangest and least understood of the known elementary particles this is fertile ground Neutrino physics is perhaps the most active field in particle physics today and IceCube is at the forefront The Telescope in the Ice is ultimately a book about people and the thrill of the chase the struggle to understand the neutrino and the pioneers and inventors of neutrino astronomy
