Why do so many promising women leave science in early and mid career? Why do women not prosper in the scientific workforce? **Not Just for the Boys** looks back at how society has historically excluded women from the scientific sphere and discourse, what progress has been made, and how more is still needed. Athene Donald, herself a distinguished physicist, explores societal expectations during both childhood and working life, using evidence of the systemic disadvantages women operate under from the developing science of how our brains are and more importantly aren't gendered to social science evidence around attitudes towards girls and women doing science. It also discusses how science is done in practice in order to dispel common myths, for example the perception that science is not creative or that it is carried out by a lone genius in an ivory tower, myths that can be very off-putting to many sections of the population. A better appreciation of the collaborative, creative, and multi-disciplinary nature of science is likely to lead to its appeal to a far wider swathe of people, especially women. This book examines the modern way of working in scientific research and how gender bias operates in various ways within it, drawing on the voices of leading women in science, describing their feelings and experiences. It argues the moral and business case for greater diversity in modern research, the better to improve science and tackle the great challenges we face today. **Emergency War Plan** Sean M. Maloney, 2021-02 Using strategic plans, intelligence analysis, and other materials that have only recently been declassified, **Emergency War Plan** examines the theory and practice of nuclear deterrence during the 1945-1960 period of the Cold War. **CERN Courier**, 2015 **Quantum Legacies** David Kaiser, 2020-03-25 A series of engaging essays that explore iconic moments of discovery and debate in physicists' ongoing quest to understand the quantum world. The ideas at the root of quantum theory remain stubbornly, famously bizarre: a solid world reduced to puffs of probability, particles that tunnel through walls, cats suspended in zombie-like states, neither alive nor dead, and twinned particles that share entangled fates. For more than a century, physicists have grappled with these conceptual uncertainties while enmeshed in the larger uncertainties of the social and political worlds around them, a time pocked by the rise of fascism, cataclysmic world wars, and a new nuclear age. In **Quantum Legacies**, David Kaiser introduces readers to iconic episodes in physicists' still-unfolding quest to understand space, time, and matter at their most fundamental. In a series of vibrant essays, Kaiser takes us inside moments of discovery and debate among the great minds of the era: Albert Einstein, Erwin Schrödinger, Stephen Hawking, and many more who have indelibly shaped our understanding of nature as they have tried to make sense of a messy world. Ranging across space and time, the episodes span the heady 1920s, the dark days of the 1930s, the turbulence of the Cold War, and the peculiar political realities that followed. In those eras, as in our own, researchers' ambition has often been to transcend the vagaries of here and now, to contribute lasting insights into how the world works that might reach beyond a given researcher's limited view. In **Quantum Legacies**, Kaiser unveils the difficult and unsteady work required to forge some shared understanding between individuals and across

generations and in doing so he illuminates the deep ties between scientific exploration and the human condition

New Destinations of Empire Emily Mitchell-Eaton, 2024-11-01 In 1986 the Compact of Free Association marked the formal end of U.S. colonialism in the Republic of the Marshall Islands while simultaneously re-entrenching imperial power dynamics between the two countries The U.S. RMI Compact at once enshrined exclusive U.S. military access to the islands and established the right of visa-free migration to the United States for Marshallese citizens leading to a Marshallese diaspora whose largest population resettled in the seemingly unlikely destination of Springdale Arkansas An all-white town by design for much of the twentieth century Springdale having nearly quadrupled in population since 1980 has been remade by Marshallese as well as Latinx immigration Through ethnographic policy-based and archival research in Guahan Saipan Hawaii Arkansas and Washington D.C. New Destinations of Empire tells the story of these place-based transformations revealing how U.S. empire both causes and constrains mobility for its subjects shaping migrants' experiences of racialization citizenship and belonging in new
