Science and Technology in the Global Cold War Naomi

Oreskes,John Krige,2014-10-31 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields

This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it. The contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state. These goals varied from nation to nation: weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated. The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics, anxieties and aspirations of the Cold War.

Parallel Computing is Everywhere S. Bassini, M. Danelutto, P. Dazzi, 2018-03-07. The most powerful computers work by harnessing the combined computational power of millions of processors and exploiting the full potential of such large scale systems is something which becomes more difficult with each succeeding generation of parallel computers. Alternative architectures and computer paradigms are increasingly being investigated in an attempt to address these difficulties. Added to this the pervasive presence of heterogeneous and parallel devices in consumer products such as mobile phones, tablets, personal computers and servers also demands efficient programming environments and applications aimed at small scale parallel systems as opposed to large scale supercomputers. This book presents a selection of papers presented at the conference Parallel Computing ParCo2017 held in Bologna Italy on 12 to 15 September 2017. The conference included contributions about alternative approaches to achieving High Performance Computing (HPC) to potentially surpass exa and zetascale performances as well as papers on the application of quantum computers and FPGA processors. These developments are aimed at making available systems better capable of solving intensive computational scientific engineering problems such as climate models, security applications and classic NP problems some of which cannot currently be managed by even the most powerful supercomputers available. New areas of application such as robotics, AI and learning systems, data science, the Internet of Things, IoT and in car systems and autonomous vehicles were also covered. As always ParCo2017 attracted a large number of notable contributions covering present and future developments in parallel computing and the book will be of interest to all those working in the field.

Racing for the Bomb Robert S. Norris, 2014-10-21. In September 1942 Colonel Leslie R Groves was given the job of building the atomic bomb. As a career officer in the Army Corps of Engineers Groves had overseen hundreds of military construction projects including the Pentagon. Until now scientists have received the credit for the Manhattan Project's remarkable achievements. And yet it was Leslie R Groves who made things happen. It was Groves who drove manufacturers, construction crews, scientists, industrialists and military and civilian officials to come up with the money, the materials and the plans to solve thousands of problems and build the bomb in only two years. It was his operation

and in *Racing for the Bomb* he emerges as a take charge can do figure who succeeds in the face of formidable odds Revealed for the first time in *Racing for the Bomb* Groves played a crucial and decisive role in the planning timing and targeting of the Hiroshima and Nagasaki missions Norris offers new insights into the complex and controversial questions surrounding the decision to drop the bomb in Japan and Groves s actions during World War II which had a lasting imprint on the nuclear age and the Cold War that followed Grove s extensive influence on key institutions of postwar America has been overlooked for too long In this full scale biography which includes archival material and family letters and documents and features several previously unpublished photographs Norris places Groves at the center of the amazing Manhattan Project story Skyhorse Publishing along with our Arcade Good Books Sports Publishing and Yucca imprints is proud to publish a broad range of biographies autobiographies and memoirs Our list includes biographies on well known historical figures like Benjamin Franklin Nelson Mandela and Alexander Graham Bell as well as villains from history such as Heinrich Himmler John Wayne Gacy and O J Simpson We have also published survivor stories of World War II memoirs about overcoming adversity first hand tales of adventure and much more While not every title we publish becomes a New York Times bestseller or a national bestseller we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home

Geoengineering our Climate? Jason J. Blackstock, Sean Low, 2018-09-04

If the detrimental impacts of human induced climate change continue to mount technologies for geoengineering our climate i.e. deliberate modifying of the Earth's climate system at a large scale are likely to receive ever greater attention from countries and societies worldwide Geoengineering technologies could have profound ramifications for our societies and yet agreeing on an international governance framework in which even serious research into these planetary altering technologies can take place presents an immense international political challenge In this important book a diverse collection of internationally respected scientists philosophers legal scholars policymakers and civil society representatives examine and reflect upon the global geoengineering debate they have helped shape Opening with essays examining the historic origins of contemporary geoengineering ideas the book goes on to explore varying perspectives from across the first decade of this global discourse since 2006 These essays methodically cover the practical and ethical dilemmas geoengineering poses the evolving geoengineering research agenda the challenges geoengineering technologies present to current international legal and political frameworks and differing perceptions of geoengineering from around the world The book concludes with a series of forward looking essays some drawing lessons from precedents for governing other global issues others proposing how geoengineering technologies might be governed if as they begin to emerge from the lab into the real world This book is an indispensable resource for scientists activists policymakers and political figures aiming to engage in the emerging debate about geoengineering our climate

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art Daniele Peila, Giulia Viggiani, Tarcisio Celestino, 2019-04-17

Tunnels and Underground Cities Engineering and Innovation meet Archaeology Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 Naples Italy 3-9 May 2019 The use of underground space is continuing to grow due to global urbanization public demand for efficient transportation and energy saving production and distribution The growing need for space at ground level along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives demand greater and better use of the underground space to ensure that it supports sustainable resilient and more liveable cities This

vision was the source of inspiration for the design of the logos of both the International ITA and Italian SIG Tunnelling Association. By placing key infrastructures underground, the black circle in the logos, it will be possible to preserve and enhance the quality of the space at ground level, the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics, and quality of life and adaptability to future and varied functions. The 700 contributions cover a wide range of topics from more traditional subjects connected to technical challenges of design and construction of underground works with emphasis on innovation in tunneling engineering to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management; contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels; Tunnels and Underground Cities. Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects, and others involved in underground planning, design, and building around the world, and for academics who are interested in underground constructions and geotechnics. **Comprehensive Remote Sensing** Shunlin Liang, 2017-11-08

Comprehensive Remote Sensing Nine Volume Set covers all aspects of the topic with each volume edited by well-known scientists and contributed to by frontier researchers. It is a comprehensive resource that will benefit both students and researchers who want to further their understanding in this discipline. The field of remote sensing has quadrupled in size in the past two decades and increasingly draws in individuals working in a diverse set of disciplines ranging from geographers, oceanographers, and meteorologists to physicists and computer scientists. Researchers from a variety of backgrounds are now accessing remote sensing data, creating an urgent need for a one-stop reference work that can comprehensively document the development of remote sensing from the basic principles, modeling, and practical algorithms to various applications. Fully comprehensive coverage of this rapidly growing discipline, giving readers a detailed overview of all aspects of Remote Sensing principles and applications. Contains Layered content with each article beginning with the basics and then moving on to more complex concepts. Ideal for advanced undergraduates and academic researchers. Includes case studies that illustrate the practical application of remote sensing principles, further enhancing understanding. *Annual Report 2014 / Institute for Pulsed Power and Microwave Technology = Jahresbericht 2014 / Institut fuer Hochleistungsimpuls- und Mikrowellentechnik* Jelonnek, John, 2015-11-02

Reviewing **Memo Physics P2014 Prelim**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is really astonishing. Within the pages of "**Memo Physics P2014 Prelim**," an enthralling opus penned by a very acclaimed wordsmith, readers attempt an immersive expedition to unravel the intricate significance of language and its indelible imprint on our lives. Throughout this assessment, we shall delve to the book is central motifs, appraise its distinctive narrative style, and gauge its overarching influence on the minds of its readers.
