Describe how expertise is related to problem solving and mental representations. Ans- Experts have better problem solving abilities due to their richer, more detailed mental representations in their specific field of expertise. Their quality and quantity of mental representations are better than those of novices allowing them to quickly take in large amounts of information, give the information meaning and produce an action plan. As they can recognize patterns, predict what will happen next, organize information, plan ahead self-evaluate and practice autonomic processing better than novices they are able to use these abilities to solve problems better.

What is the nature of expertise (i.e. what features characterise expertise)? Describe the advantages experts enjoy thanks to the mental representations they have developed. Ans- As experts have richer and more detailed mental representations they are able to recognize patterns, predict what will happen next, organize their information, plan ahead, self-evaluate and autonomically process better than novices. These abilities allow experts to take in, give meaning to and chose an action plan faster than novices.

What did the study of violinists attending the music academy & music education department at the Berlin University of the Arts lead Ericsson and colleagues to conclude about the expertise? How is this related to the monotonic benefits assumption? Ans- As the monotonic benefits assumption explains that performance is directly related to the number of hours of deliberate practice a learner accumulates the study of the violinists demonstrates just that. It can be concluded from the assumption that experts accumulate more hours and performance at similar levels of accumulation should be similar. This was demonstrated by the levels of expertise of the violinists compared to the number of hours they had accumulated. Ericsson and his colleagues concluded from the evidence that approximately 10 000 hours of deliberate practice was needed to become an expert.

Describe the common features in nurturing expertise ("the recipe") that was demonstrated by Laszlo Polgar, Karl Witte Sr., Leopold Mozart, Richard Williams and Earl Woods. Ans- The recipe for developing expertise demonstrated by the parents was that their children needed to have a love for the skill and motivated to learn it. The children also needed to accumulate lots of hours of deliberate practice. Furthermore, the parents all had knowledge of pedagogy and how to instruct their child on how to perform their and adequate time to do it. Lastly, they provided adequate resources to develop learning.
