The Pursuit of Europe Anthony Pagden, 2022 The European Union we are told is facing extinction Most of those who believe that however have no understanding of how and why it became possible to imagine that the diverse peoples of Europe might be united in a single political community The Pursuit of Europe tells the story of the evolution of the European project from the end of the Napoleonic Wars which saw the earliest creation of a Concert of Europe right through to Brexit The question was how after centuries of internecine conflict to create a united Europe while still preserving the political legal and cultural integrity of each individual nation The need to find an answer to this question became more acute after two world wars had shown that if the nations of Europe were to continue to play a role in the world they could now only do so together To achieve that however they had to be prepared to merge their zealously guarded sovereign powers into a new form of trans national constitutionalism This the European Union has tried to do Here Anthony Pagden argues that it has created not as its enemies have claimed a super state but a new post national order united in a political life based not upon the old shibboleths of nationalism and patriotism but upon a common body of values and aspirations It is this argues Pagden that will allow the Union to defeat its political enemies from within and to overcome the difficulties from mass migration to the pandemic which it faces from without But it will only succeed in doing so if it also continues to evolve as it has over the past two centuries

Byte , 1982 [NASA Tech Briefs](#) , 1996 **Laws of Nature and Chances** Barry Loewer, 2024-06-25 Barry Loewer presents a novel account of the metaphysics of law of nature chances fundamental ontology and the space time arena they occupy He calls this the Package Deal Account This aims to answer Stephen Hawking s question What is it that breathes fire into the equations and makes a universe for them to describe Loewer s account stands on the shoulders of David Lewis s

Humean Best Systems Account of laws and chances but rejects Lewis Humean ontology of natural properties and instead lets the criteria that physicists employ for evaluating candidate fundamental theories of everything together with reality determine the universe's fundamental ontology The Package Deal Account thus advances the project of naturalizing metaphysics Loewer discusses the history of the concept of laws of nature current philosophical accounts of the metaphysics of laws and arguments for and against each of these He then shows how the Package Deal Account overcomes objections to each and how unlike Lewis's Humean account and its non Humean rivals it is able to accommodate recent developments in physics including proposals for theories of quantum gravity that reject the fundamentality of space time Loewer provides in addition an account of the laws and chances that occur in non fundamental special sciences and how they are related to those of fundamental physics
