Polyphenylene Oxide and Modified Polyphenylene Oxide Membranes Geeta Chowdhury, Boguslaw Kruczek, Takeshi Matsuura, 2001-10-31 Fluid membrane material interfaces morphologies of membrane surface and the sub layer underneath the membrane surface and fluid transport through the membrane governed by the above interface and morphology parameters and driving forces involved in process operation all these three aspects together constitute the fundamental physico chemical and engineering basis for the practical success of Membrane Separation Technology MST in all its applications Quantitative data on the above interface and morphology parameters and applicable transport equations involving the above parameters are needed for membrane design specification of membranes modules and systems and prediction of their performance for any given separation application Even though more than 40 years have elapsed since the emergence of the field of MST there are very few books which deal with all the above three aspects of the subject in an integrated manner This simply shows that the field of MST is still in its early stages of development and only a small fraction of its vast potential has been practically realized to date Still what has already accomplished is extraordinary both in its scope and in its impact on scientific research and service to society at large

Quantitative Anaesthesia K. van Ackern, H. Frankenberger, E. Konecny, K. Steinbereithner, 2012-12-06 Quantitative anaesthesia exact registration of the degree of anaesthesia has long been the anaesthetist's dream Such precision could decrease the risk for the patient Can this dream now be realized in the foreseeable future And can the quantification be technically verified This workshop was organized for these questions to be discussed by a group of experts Schleswig Holstein was a logical location for such a gathering Medical and associated technical advances have socioeconomic consequences in Schleswig Holstein there are nowadays more jobs in medical technology than in the traditional shipbuilding industry The encouragement of medical research and related technical innovation is thus a central component of public policy One result of this emphasis was the recent setting up of a study group on medical technology one of the aims of which is to provide a forum in Schleswig Holstein for meetings such as this The intention is to consolidate Schleswig Holstein's reputation as a centre for both medical technical development and scientific discussion The organizers of this scientific workshop thank the Schleswig Holstein Ministry of Economics and Transport and Drägerwerk AG for their support

Gyroid Optical Metamaterials James A. Dolan, 2018-11-04 This thesis explores the fabrication of gyroid forming block copolymer templates and the optical properties of the resulting gyroid optical metamaterials significantly contributing to our understanding of both It demonstrates solvent vapour annealing to improve the long range order of the templates and investigates the unique crystallisation behaviour of their semicrystalline block Furthermore it shows that gyroid optical metamaterials that exhibit only short range order are optically equivalent to nanoporous gold and that the anomalous linear dichroism of gyroid optical metamaterials with long range order is the result of the surface termination of the bulk gyroid morphology Optical metamaterials are artificially engineered materials that by

virtue of their structure rather than their chemistry may exhibit various optical properties not otherwise encountered in nature e g a negative refractive index However these structures must be significantly smaller than the wavelength of visible light and are therefore challenging to fabricate using traditional top down techniques Instead a bottom up approach can be used whereby optical metamaterials are fabricated via templates created by the self assembly of block copolymers One such morphology is the gyroid a chiral continuous and triply periodic cubic network found in a range of natural and synthetic self assembled systems
