Interpretive Theme Writer's Field Guide Jon Kohl, 2018-11-15 The interpretive theme is the most important sentence an interpreter inks on paper. Despite its centrality to thematic interpretation, no single work has dedicated itself entirely to the art and craft of strong theme writing until now. The Interpretive Theme Writer's Field Guide builds on Sam Ham's 30-year thematic interpretation research legacy. While leaving theory to his books, this pocket companion offers writers strong theme examples, worksheets, exercises, inspirational quotes and technique highlights. With contributions from Sam Ham, Ted Cable, Shelton Johnson and Clark Hancock, this Field Guide is useful at the desk in the exhibit hall or on the trail. It recognizes that teams, even communities, create heritage themes and introduces the Interpretive Framework methodology to facilitate community-based theme writing.

A Field Guide to Genetic Programming, 2008 Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically, starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an "ooze" of random computer programs and progressively refines them through processes of mutation and sexual recombination until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

Product Focused Software Process Improvement Frank Bomarius, Hajimu Iida, 2004-03-09 On behalf of the PROFES organizing committee, we are proud to present to you the proceedings of the 5th International Conference on Product Focused Software Process Improvement (PROFES 2004) held in Kansai Science City, Japan. Since 1999, PROFES has established itself as one of the recognized international process improvement conferences. In 2004, the conference left Europe for the first time and moved to Japan, Japan and its neighboring

countries are intensifying their efforts to improve software engineering excellence so it was a logical step to select Japan as the venue for PROFES 2004. The purpose of the conference is to bring to light the most recent findings and results in the area and to stimulate discussion between researchers, experienced professionals and technology providers. The large number of participants coming from industry confirms that the conference provides a variety of up to date topics and tackles industry problems. The main theme of PROFES is professional software process improvement (SPI) motivated by product and service quality needs. SPI is facilitated by software process assessment, software measurement, process modeling and technology transfer. It has become a practical tool for quality software engineering and management. The conference addresses both the solutions found in practice and the relevant research results from academia. This is reflected in the 41 full papers which are a balanced mix of academic papers as well as industrial experience reports.
