John von Neumann and the Origins of Modern Computing William Aspray, 1990-12-07 William Aspray provides the first broad and detailed account of von Neumann s many different contributions to computing John von Neumann 1903 1957 was unquestionably one of the most brilliant scientists of the twentieth century He made major contributions to quantum mechanics and mathematical physics and in 1943 began a new and all too short career in computer science William Aspray provides the first broad and detailed account of von Neumann s many different contributions to computing These Aspray reveals extended far beyond his well known work in the design and construction of computer systems to include important scientific applications the revival of numerical analysis and the creation of a theory of computing Aspray points out that from the beginning von Neumann took a wider and more theoretical view than other computer pioneers In the now famous EDVAC report of 1945 von Neumann clearly stated the idea of a stored program that resides in the computer s memory along with the data it was to operate on This stored program computer was described in terms of idealized neurons highlighting the

analogy between the digital computer and the human brain Aspray describes von Neumann's development during the next decade and almost entirely alone of a theory of complicated information processing systems or automata and the introduction of themes such as learning reliability of systems with unreliable components self replication and the importance of memory and storage capacity in biological nervous systems many of these themes remain at the heart of current investigations in parallel or neurocomputing Aspray allows the record to speak for itself He unravels an intricate sequence of stories generated by von Neumann's work and brings into focus the interplay of personalities centered about von Neumann He documents the complex interactions of science the military and business and shows how progress in applied mathematics was intertwined with that in computers William Aspray is Director of the Center for the History of Electrical Engineering at The Institute of Electrical and Electronics Engineers ITS Annual Technical Progress Report Institute for Telecommunication Sciences, *Research in Education*, 1973 Report Commonwealth Shipping Committee, 1913
