Comptes-rendus G. Vouille, P. Berest, 1999 **Science Abstracts**, 1995 *Robotics, Vision and Control* Peter Corke, 2017-05-20 Robotic vision the combination of robotics and computer vision involves the application of computer algorithms to data acquired from sensors The research community has developed a large body of such algorithms but for a newcomer to the field this can be quite daunting For over 20 years the author has maintained two open source MATLAB Toolboxes one for robotics and one for vision They provide implementations of many important algorithms and allow users to work with real problems not just trivial examples This book makes the fundamental algorithms of robotics vision and control accessible to all It weaves together theory algorithms and examples in a narrative that covers robotics and computer vision separately and together Using the latest versions of the Toolboxes the author shows how complex problems can be decomposed and solved using just a few simple lines of code The topics covered are guided by real problems observed by the author over many years as a practitioner of both robotics and computer vision It is written in an accessible but informative style easy to read and absorb and includes over 1000 MATLAB and Simulink examples and over 400 figures The book is a real walk through the fundamentals of mobile robots arm robots then camera models image processing feature extraction and multi view geometry and finally bringing it all together with an extensive discussion of visual servo systems This second edition is completely revised updated and extended with coverage of Lie groups matrix exponentials and twists inertial navigation differential drive robots lattice planners pose graph SLAM and map making restructured material on arm robot kinematics and dynamics series elastic actuators and operational space control Lab color spaces light field cameras structured light bundle adjustment and visual odometry and photometric visual servoing An authoritative book reaching across fields thoughtfully conceived and brilliantly accomplished OUSSAMA KHATIB Stanford **Dissertation Abstracts**

International, 2005 Intuitive Probability and Random Processes using MATLAB® Steven Kay, 2006-03-20 Intuitive Probability and Random Processes using MATLAB is an introduction to probability and random processes that merges theory with practice Based on the author's belief that only hands on experience with the material can promote intuitive understanding the approach is to motivate the need for theory using MATLAB examples followed by theory and analysis and finally descriptions of real world examples to acquaint the reader with a wide variety of applications The latter is intended to answer the usual question Why do we have to study this Other salient features are heavy reliance on computer simulation for illustration and student exercises the incorporation of MATLAB programs and code segments discussion of discrete random variables followed by continuous random variables to minimize confusion summary sections at the beginning of each chapter in line equation explanations warnings on common errors and pitfalls over 750 problems designed to help the reader assimilate and extend the concepts Intuitive Probability and Random Processes using MATLAB is intended for undergraduate and first year graduate students in engineering The practicing engineer as well as others having the appropriate mathematical background will also benefit from this book About the Author Steven M Kay is a Professor of Electrical Engineering at the University of Rhode Island and a leading expert in signal processing He has received the Education Award for outstanding contributions in education and in writing scholarly books and texts from the IEEE Signal Processing society and has been listed as among the 250 most cited researchers in the world in engineering The Theory and Construction of Multivariate Gaussian Surfaces Luise S. Schuetz, George G Zipfel (Jr), NAVAL RESEARCH LAB WASHINGTON D C., Naval Research Laboratory, 1973 A procedure has been developed for the construction of random rough surfaces with statistics which approximate the ideal of multivariate Gaussian statistics with a prescribed spectrum Estimates of the deviation of the sample surfaces from the ideal ensemble statistics are made The procedure uses a fast Fourier transform algorithm to produce a numerical surface which is then used to construct a physical realization of the surface via a numerically controlled milling machine The resulting surface is one which can be used in scattering experiments and the degree of conformity of its statistics to those of the ideal is well understood The use of these surfaces will eliminate a major source of uncertainty in the interpretation of controlled experiments Author **A Note Concerning the Simulation of Gaussian Rough Surfaces** T. K. Tran, D. W. Cooper, 1992 Random Signals and Processes Primer with MATLAB Gordana Jovanovic Dolecek, 2012-08-21 This book provides anyone needing a primer on random signals and processes with a highly accessible introduction to these topics It assumes a minimal amount of mathematical background and focuses on concepts related terms and interesting applications to a variety of fields All of this is motivated by numerous examples implemented with MATLAB as well as a variety of exercises at the end of each chapter **Gaussian Random Processes** I.A. Ibragimov, IŮrii Anatol'evich Rozanov, 1978-12-22 The book deals mainly with three problems involving Gaussian stationary processes The first problem consists of clarifying the conditions for mutual absolute continuity equivalence of probability distributions of a random

process segment and of finding effective formulas for densities of the equivalent distributions Our second problem is to describe the classes of spectral measures corresponding in some sense to regular stationary processes in particular satisfying the well known strong mixing condition as well as to describe the subclasses associated with mixing rate The third problem involves estimation of an unknown mean value of a random process this random process being stationary except for its mean i e it is the problem of distinguishing a signal from stationary noise Furthermore we give here auxiliary information on distributions in Hilbert spaces properties of sample functions theorems on functions of a complex variable etc Since 1958 many mathematicians have studied the problem of equivalence of various infinite dimensional Gaussian distributions detailed and systematic presentation of the basic results can be found for instance in [23] In this book we have considered Gaussian stationary processes and arrived we believe at rather definite solutions The second problem mentioned above is closely related with problems involving ergodic theory of Gaussian dynamic systems as well as prediction theory of stationary processes
