

A computer is a **machine** that can be programmed to carry out **sequences of arithmetic or logical operations** automatically. Modern computers can perform generic sets of operations known as **programs**. These programs enable computers to perform a wide range of tasks. A computer system is a "complete" computer that includes the **hardware, operating system** (main software), and **peripheral** equipment needed and used for "full" operation. This term may also refer to a group of computers that are linked and function together, such as a **computer network** or **computer cluster**.

A broad range of **industrial** and **consumer products** use computers as **control systems**. Simple special-purpose devices like **microwave ovens** and **remote controls** are included, as are factory devices like **industrial robots** and **computer-aided design**, as well as general-purpose devices like **personal computers** and **mobile devices** like **smartphones**. Computers power the **internet**, which links hundreds of millions of other computers and users.
