Memo For Geography Paper 24:

The Aftermath of Partition in South Asia Gyanesh Kudaisya, Tan Tai Yong, 2004-03-01 This book draws upon new theoretical insights and fresh bodies of data to historically reappraise partition in the light of its long aftermath. It uses a comparative approach by viewing South Asia in its totality rather than looking at it in narrow national terms. As the first book to focus on the aftermath of partition, it fills a distinctive niche in the study of contemporary South Asia. **Interim**

SIPRE Report, **NOAA Technical Memorandum EDS**. United States. National Oceanic and Atmospheric Administration, 1971 *Monographic Series* Library of Congress, 1980 **An Ocean in Common** Gary E. Weir, 2001

Through two victorious world conflicts and a Cold War the U S Navy and American ocean scientists drew ever closer, converting an early marriage of necessity into a relationship of astonishing achievement. Beginning in 1919 Gary Weir's *An Ocean in Common* traces the first forty-two years of their joint quest to understand each other and the deep ocean. Early in the twentieth century American naval officers questioned the tactical and strategic significance of applied ocean science, demonstrating the gap between this kind of knowledge and that deemed critical to naval warfare. At the same time, scientists studying the ocean labored in their inadequately funded discreet disciplines, seemingly content to keep naval warfare at arm's length. German U-boat success in World War I changed these views fundamentally, bringing ocean science insights to an increasing number of naval objectives. Driven primarily by anti-submarine priorities, the physics, chemistry, and geology of the ocean, more than its biology, became the early focus of American ocean studies. The World War II experience solidified the Navy's relationship with ocean scientists, and the years after 1945 found the American military investing heavily in both applied and basic research. Today oceanography is a permanent resident on the bridge of American fighting ships, and the Navy continues to provide much of the impetus and funding for fundamental research in both naval and civilian laboratories. In *An Ocean in Common*, Gary Weir focuses on the compelling motives and carefully engineered course that brought scientists and naval officers together across a considerable cultural divide to achieve a more comprehensive understanding of one another and the world ocean. Weir details how this alliance laid the powerful multidisciplinary foundation for long-range ocean communication and surveillance, modern submarine warfare, deep submergence, and the emergence of oceanography and ocean engineering as independent and vital fields of study. *NASA Technical Memorandum*, 1976

Data Access Descriptions, 1970 Memorandum Folio Association of American Geographers. Southeastern Division, 1959 **Difficult Folk?** David Mills, 2008-05-01 How should we tell the histories of academic disciplines? All too often the political and institutional dimensions of knowledge production are lost beneath the intellectual debates. This book redresses the balance. Written in a narrative style and drawing on archival sources and oral histories, it depicts the complex pattern of personal and administrative relationships that shape scholarly worlds. Focusing on the field of social anthropology,

in twentieth century Britain this book describes individual departmental and institutional rivalries over funding and influence. It examines the efforts of scholars such as Bronislaw Malinowski, Edward Evans Pritchard and Max Gluckman to further their own visions for social anthropology. Did the future lie with the humanities or the social sciences with addressing social problems or developing scholarly autonomy? This new history situates the discipline's rise within the post-war expansion of British universities and the challenges created by the end of Empire.
