

Human Geography

Lecture 1.1

Geo= Earth / World

Graphy= Writing

Geography= Understanding the world we live in

Earth: 2 meanings 1- **Living Earth**

2-the earth means to **explore its extents**, to describe its areas, places and people, to consider how and why these may have distinctive qualities.

Relationship between Human society and Nature: **Earth**

Environmental value and understanding, causes and responses to environmental change. **How our relationship with nature changes across different areas.**

What we consider "nature" is impregnated with different meanings which have changed over time

Relationship between Human society and Space: **World**

Why does something happen in a specific place?

Human life is shaped by 'where it happens' and that **'where it happens' is socially shaped**. The world and its differences are not innate; they are made. Geographers study making

There is a third relationship to take into consideration: Integration of different elements such as cultural , economic etc...

EXAMPLE: Oven-chicken.

Human-nature: logics and practices of domestication, industrialized production, purposive modification and commodity consumption that reach well beyond this one member of the animal kingdom

Human-space: Different people and places are all connected together through the economic systems of the chicken world – the consumers eating it, the farmers raising it, the large companies controlling its production and its distribution, the scientists genetically modifying it.

Human Geography is taught very differently around the world and in different universities but there are some common themes which are touched although the way in which they are, again, differs.

FIRST- Describing the world. Carefully analyzing, mapping and fashioning things such as wealth distribution, tracing people's connections, beliefs etc.... Sometimes it means to literally observe the surroundings and describe its compositions, its history.
