

FUNCIONAMIENTO MONOFÓNICO

impedancia mínima de 2 ohmios

NOTA: los terminales de altavoces en la ZX2500.1 están en el panel del extremo opuesto.

FUNCIONAMIENTO

Selección de Encendido Automático: La serie ZX ofrece tres modalidades de encendido automático que se pueden seleccionar en el panel de extremo: +12V, compensación de CC y audio. Las modalidades de audio o compensación de CC dan +12V a la terminal REM para encender otros amplificadores.

- Encendido a Distancia: Ponga el selector en +12V para usar el conductor de encendido a distancia de la unidad fuente. Instale cable calibre 18 desde el conductor de encendido a distancia de la unidad fuente hasta la terminal etiquetada REM entre las terminales de alimentación positiva y negativa del amplificador. Este es el método de encendido automático preferido.
- Encendido por Compensación de CC: Si el encendido a distancia no es posible, la siguiente opción preferible es DC Offset. En la modalidad de compensación de CC, el amplificador detecta una subida de 6V de las salidas de altavoz de alto nivel cuando la unidad fuente se ha encendido.
- Encendido por Detección de Señal: La modalidad de es la opción final de encendido automático. Este es un método de encendido en que el amplificador detecta la señal de audio procedente de la unidad fuente y se enciende automáticamente. Este método de encendido no funciona correctamente si el control de amplificación de entrada no se ha fijado correctamente.
