The book has two overarching goals The first goal is to introduce different available numerical procedures for finding solutions to linear equations roots of polynomial equations interpolation and approximation numerical differentiation and integration differential equations and error analysis The second goal is to translate theory into practice through applying commonly used numerical methods in mathematics physical sciences biomedical sciences and engineering This book was crafted in an informal and user friendly manner to motivate the study of the material being covered Ample figures and numerical tables are presented to enhance the reader s ease of understanding of the material under consideration **American Federal Tax Reports** ,1976 The Shock and Vibration Digest ,1976-07 Practical Essentials of Intensity Modulated Radiation Therapy K. Clifford Chao, Smith Apisarnthanarax, Gokhan Ozvigit, 2005 The primary objective of this book is to teach residents fellows and clinicians in radiation oncology how to incorporate intensity modulated radiation therapy IMRT into their practice IMRT has proven to be an extremely effective treatment modality for head and neck cancers It is now being used effectively in other sites including prostate breast lung gynecological the cervix the central nervous system and lymph nodes The book will provide in a consistent format an overview of the natural course lymph node spread diagnostic criteria and therapeutic options for each cancer subsite Development of Selective DNA-Interacting Ligands Sefan Asamitsu, 2020-09-16 This book addresses the development of both DNA sequence selective and DNA form selective ligands with the aim of creating potential molecular probes and therapeutic agents for non canonical DNA structure caused human diseases Over the past two decades the structural diversity of DNA forms has been proven to have profound implications in various biological neurological and pharmacological events In response researchers have since made tremendous efforts to obtain highly active drugs interacting with disease related non canonical DNA structures These drugs however have not yet been approved for clinical use One obstacle impeding their clinical application has to do with selectivity This book focuses on secondary DNA structures formed by trinucleotide repeat sequences hairpin form or guanine rich sequences G quadruplex form both of which are pathological molecules for neurodegenerative diseases and or cancer Most importantly it contends that a particular secondary structure of DNA in the context of the human genome can be targeted with a minimal affinity to other DNA structures by means of careful and rational ligand design This approach opens an avenue to the development of highly selective drugs or diagnostic chemical tools for human diseases Readers who want to know how synthetic ligands can be
