

## Gizmos: Senses

### Gizmo Warm-up

**Stimuli** are changes inside or outside the body that cause a response. In the Senses Gizmo, you will explore how different sense organs detect stimuli from the environment and send messages about that stimulus to the brain.

On the NEURAL PATHWAYS tab, drag the apple slice into the white **Stimulus** box. Drag the eye into the **Sense organ** box. Click **Play** (▶).

1. What do you observe?

A apple

2. How do you know that the eye senses the apple?

nerve cells transmit light signals to the brain, then the visual cortex in the brain processes the signals to create the perception of vision

3. The **neural pathway** represents the **nerves** that connect the sense organ to the brain. What happens along the neural pathway when the eye sees the apple?

The visual cortex in the brain processes the signals to create the perception of vision when nerve cells transmit light signals to the brain. Light receptors are activated in the back of the eye by incoming light

### Activity A: Senses and the brain

#### Get the Gizmo ready:

- On the NEURAL PATHWAYS tab, click **Reset** (↺).

**Introduction:** The brain is organized into different regions that have different functions. Most sensory information is processed in the **cerebrum**, the “wrinkly” area that forms the outer part of the brain. The nerves that connect a sense organ to the part of the brain responsible for that sense is called the neural pathway.

### Question: What happens when stimuli are detected by sense organs?

1. **Observe:** Drag the apple into the **Stimulus** box and the tongue into the **Sense organ** box. Click **Play**.

A. What does the tongue detect?

A apple

B. What happens along the neural pathway when the tongue detects the stimulus?

The tongue reacts to molecules in food, activating nerve cells. Nerve cells transmit taste signals to the brain
