Angles and Angle Measure

Angles in Standard Position An angle is determined by two rays. The degree measure of an angle in standard position is described by the amount and direction of rotation from the **initial side**, which lies along the positive x -axis, to the **terminal side**. A counterclockwise rotation is associated with positive angle measure and a clockwise rotation is associated with negative angle measure. Two or more angles in standard position with the same terminal side are called **coterminal angles**.

Example 1: Draw an angle with measure 290° in standard position.

The negative y -axis represents a positive rotation of 270° . To generate an angle of 290° , rotate the terminal side 20° more in the counterclockwise direction

Example 2: Find an angle with a positive measure and an angle with a negative measure that are coterminal with each angle.

a. 250°

A positive angle is $250^\circ + 360^\circ$ or 610° . Add 360° .
A negative angle is $250^\circ - 360^\circ$ or -110° . Subtract 360° .

b. -140°

A positive angle is $-140^\circ + 360^\circ$ or 220° . Add 360° .
A negative angle is $-140^\circ - 360^\circ$ or -500° . Subtract 360° .
