Human

Reproduction L. M. Baggott,1997-02-20 Concise introductory textbook examining human reproduction for advanced school and beginning university students

Human Reproductive Biology Richard Evan Jones,1997 The fourth edition of Human Reproductive Biology emphasizes the biological and biomedical aspects of human reproduction explains advances in

reproductive science and discusses the choices and concerns of today. Generously illustrated in full color, the text provides current information about human reproductive anatomy and physiology. This expansive text covers the full range of topics in human reproduction from the biology of male and female systems to conception, pregnancy, labor and birth. It goes on to cover issues in fertility and its control, population growth and family planning, induced abortion and sexually transmitted diseases. This is the ideal book for courses on human reproductive biology with chapter introductions, sidebars on related topics, chapter summaries and suggestions for further reading. Beautifully redrawn full color illustrations complement completely updated material with the latest research results and clear logical presentation of topics. Covers the basic science of reproduction, endocrinology, anatomy, physiology, development, function and senescence of the reproductive system as well as applied aspects including contraception, infertility and diseases of the reproductive system. New companion website features full color illustrations as PPT and jpeg files for both professors and students to use for study and presentations. Human Reproductive Biology Sylvia S. Mader, 2005. This text presents human reproduction from the biological point of view. It is most appropriate for use by non-science students who would like a biological understanding of human reproduction. The three parts of the book may be studied in whatever sequences the instructor desires. Part I contains topics on human inheritance and biotechnology. Part II has in-depth coverage of fertilization and the major biological events of embryonic and fetal development. In Part III, the evolution of sexual reproduction is presumed to have increased biological fitness. *Human Reproduction and Developmental Biology* David J. Begley, J. A. Firth, J. R. S. Hoult, 1980. *How We Do It* Robert Martin, 2013-06-11. Despite the widespread belief that natural is better when it comes to sex, pregnancy and parenting, most of us have no idea what natural really means. The origins of our reproductive lives remain a mystery. Why are a quarter of a billion sperm cells needed to fertilize one egg? Are women really fertile for only a few days each month? How long should babies be breast fed? In *How We Do It*, primatologist Robert Martin draws on forty years of research to locate the roots of everything from our sex cells to the way we care for newborns. He examines the procreative history of humans as well as that of our primate kin to reveal what's really natural when it comes to making and raising babies and distinguish which behaviors we ought to continue and which we should not. Although it's not realistic to raise our children like our ancestors did, Martin's investigation reveals surprising consequences of and suggests ways to improve upon the way we do things now. For instance, he explains why choosing a midwife rather than an obstetrician may have a greater impact than we think on our birthing experience, examines the advantages of breast feeding for both mothers and babies and suggests why babies may be ready for toilet training far earlier than is commonly practiced. *How We Do It* offers much needed context for our reproductive and child rearing practices and shows that once we understand our evolutionary past, we can consider what worked, what didn't, and what it all means for the future of our species. **Human Reproduction**, 1970 **The Biology of Human Reproduction** John Juan Head, 1979-01-01 **Human Reproduction** Doreen King, 2003-01-01
