Simon,2014-12-23 Big History is a new field on a grand scale it tells the story of the universe over time through a diverse range of disciplines that spans cosmology physics chemistry astronomy geology evolutionary biology anthropology and archaeology thereby reconciling traditional human history with environmental geography and natural history Weaving the myriad threads of evidence based human knowledge into a master narrative that stretches from the beginning of the universe to the present the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them Teaching Big History is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching Big History as well for sharing ideas about the subject and planning a curriculum around it Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History The book includes teaching materials examples and detailed sample exercises This book is also an engaging first hand account of how a group

of professors built an entire Big History general education curriculum for first year students demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike **Lessons from the Local Group** Kenneth Freeman, Bruce Elmegreen, David Block, Matthew Woolway, 2014-11-13 Our understanding of galaxy formation comes mostly from two sources sensitive observations at high angular resolution of the high redshift Universe where galaxies are observed to be forming and detailed observations of individual stars and clouds in the Local Group where telltale remnants from its formative time remain and similar processes operate at a low level today The current conference focusses on key aspects of the Local Group composed of the Milky Way Andromeda and Triangulum Spiral Galaxies the Large and Small Magellanic Cloud galaxies numerous dwarf and irregular galaxies and intergalactic gas Topics include the halo and thick disk of the Milky Way with its first stars and stellar streams the Milky Way bar bulge and outer edge interstellar dust and turbulence star formation processes and stellar scattering in spiral arms views through the infrared Eyes of the Spitzer Space Telescope globular clusters the Local Gould Belt stellar metallicities and elemental abundances the environment and black hole in the Milky Way nucleus orbits of the Magellanic Clouds and galaxy dwarfs interstellar dust and turbulence the outer disks and halos of the Andromeda and Triangulum galaxies ripples from a collision in Andromeda and arcs of carbon stars in the Triangulum and intergalactic clouds This volume also discusses surveys of planetary nebulae galaxy morphology at low and high redshift cosmic evolution of star and galaxy formation and gas accretion Lyman alpha emitting galaxies ultra low surface brightness imaging and more Readers are given a clear and comprehensive view of this wide range of topics written by specialists in each field This is the proceedings of an International Conference at the Seychelles archipelago in May 2014 on the occasion of the 60th birthday of David Block and the millionth base two birthday of Bruce Elmegreen *Thinking Physics for Teaching* C. Bernardini, C. Tarsitani, M. Vicentini, 2012-12-06 The research in Physics Education has to do with the search of solutions to the complex problem of how to improve the learning and teaching of physics The complexity of the problem lies in the different fields of knowledge that need to be considered in the research In fact besides the disciplinary knowledge in physics which must be considered from the conceptual the historical and the epistemological framework one has to take into account some basic knowledge in the context of psychology and the cognitive sciences for the general and contextual aspects of learning and some basic knowledge in education and communication for what concerns teaching skills and strategies Looking back at the historical development of the research one may recognize that the complexity of the endeavour was not clear at first but became clear in its development which shifted the focus of the research in the course of time from physics to learning to teaching We may say that the research started more than 30 years ago with a focus on disciplinary knowledge Physicists in different parts of the western world after research work in some field of physics decided to concentrate on the didactical communication of physical knowledge **Magnetic Fields Across the**
